

# Documented Code for datatool v2.27

Nicola L. C. Talbot

<http://www.dickimaw-books.com/>

2016-07-28

This is the documented code for the datatool bundle. See [datatool-user.pdf](#) for the main user manual.

# 1 datatool-base.sty

This package provides all the basic commands needed by various packages in the datatool bundle.

```
\NeedsTeXFormat{LaTeX2e}
\ProvidesPackage{datatool-base}[2016/07/28 v2.27 (NLCT)]
```

Required packages:

```
\RequirePackage{etoolbox}
\RequirePackage{amsmath}
\RequirePackage{xkeyval}
\RequirePackage{xfor}
\RequirePackage{ifthen}
```

Version of required that fixes \su@ifSubStringInString

```
\RequirePackage{substr}[2009/10/20]
```

## 1.1 Package Options

**verbose** Define key for package option verbose. (This also switches the fp messages on/off if datatool-fp used.) This boolean may already have been defined if datatool has been loaded.

```
\ifundef{\ifdtlverbose}
{
  \define@boolkey{datatool-base.sty}[dtl]{verbose}[true]{}
}%
{}
```

**math** Determine whether to use fp or pgfmath for the arithmetic commands. The default is to use fp.

```
\define@choicekey{datatool-base.sty}{math}[\val\nr]{fp,pgfmath}{%
  \renewcommand*\@dtl@mathprocessor{#1}%
}
```

**utf8** Enable UTF-8 support in comparison handlers. This is still a bit experimental, so it needs to be explicitly switched on.

```
\define@boolkey{datatool-base.sty}[@dtl@]{utf8}[true]{}
\ifdef\UTFviii@two@octets
{\booltrue{@dtl@utf8}}%
{\boolfalse{@dtl@utf8}}
```

**dtlenableUTFviii**

```
\newcommand*\dtlenableUTFviii{\booltrue{@dtl@utf8}}
```

ldisableUTFviii

```
\newcommand*{\dtldisableUTFviii}{\boolfalse{@dtl@utf8}}
```

l@mathprocessor

```
\providecommand*{\@dtl@mathprocessor}{fp}
```

Process options:

```
\ProcessOptionsX
```

Load package dealing with numerical processes:

```
\RequirePackage{datatool-\@dtl@mathprocessor}
```

## 1.2 Utilities

`\dtl@message` `\dtl@message{<message string>}`

Displays message only if the verbose option is set.

```
\newcommand*{\dtl@message}[1]{%
  \ifdtlverbose\typeout{#1}\fi
}
```

`\@dtl@toks`

```
\newtoks\@dtl@toks
```

`\@dtl@tmpcount` Define temporary count register

```
\newcount\@dtl@tmpcount
```

`\dtl@tmplength` Define temporary length register:

```
\newlength\dtl@tmplength
```

`\dtl@ifsingle` `\dtl@ifsingle{<arg>}{<true part>}{<false part>}`

If there is only one object in `<arg>` (without expansion) do `<true part>`, otherwise do false part.

```
\newcommand{\dtl@ifsingle}[3]{%
  \def\@dtl@arg{#1}%
  \ifdefempty{\@dtl@arg}%
  {%
    #3%
  }%
  {%
    \@dtl@ifsingle#1\@nil{#2}{#3}%
  }%
}
```

`\@dtl@ifsingle`

```
\def\@dtl@ifsingle#1#2\@nil#3#4{%
  \def\dtl@sg@arg{#2}%
  \ifdefempty{\dtl@sg@arg}%
  {%
    #3%
  }%
  {%
    #4%
  }%
}
```

`singleorUTFviii` As above but also checks for UTF8.

```
\newcommand{\dtl@ifsingleorUTFviii}[3]{%
  \ifbool{\dtl@utf8}
  {%
    \def\@dtl@arg{#1}%
    \ifdefempty{\@dtl@arg}%
    {%
      #3%
    }%
    {%
      \expandafter\dtl@if@two@octets#1\relax\relax\dtl@end@if@two@octets
      {%
        \dtl@getfirst@UTFviii#1\@nil\end@dtl@getfirst@UTFviii
        \ifdefempty\dtl@rest{#2}{#3}%
      }%
      {%
        \@dtl@ifsingle#1\@nil{#2}{#3}%
      }%
    }%
  }%
  {%
    \dtl@ifsingle{#1}{#2}{#3}%
  }%
}
```

`ifintopenbetween`

```
\dtlifintopenbetween{<num>}{<min>}{<max>}{<true part>}{<false part>}
```

If we're dealing with integers it's more efficient to use TeX's `\ifnum`.

```
\newcommand{\dtlifintopenbetween}[5]{%
  \ifnum#1>#2\relax
```

Greater than minimum value. Is it less than the maximum?

```
\ifnum#1<#3\relax
  #4%
\else
```

```

        #5%
    \fi
\else
    #5%
\fi
}

```

```

intclosedbetween \dtlifintclosedbetween{<num>}{<min>}{<max>}{<true part>}{<false part>}

```

If we're dealing with integers it's more efficient to use  $\mathrm{T}_{\mathrm{E}}\mathrm{X}$ 's `\ifnum`.

```

\newcommand{\dtlifintclosedbetween}[5]{%
  \dtlifintopenbetween{#1}{#2}{#3}{#4}%
  {%

```

Check end points.

```

    \ifnum#1=#2\relax
      #4%
    \else
      \ifnum#1=#3\relax
        #4%
      \else
        #5%
      \fi
    \fi
  }%
}

```

`\long@collect@body` Need long versions of `'s \collect@body`. These macros are adapted from the macros defined by `amsmath`.

```

\long\def\long@collect@body#1{%
  \@envbody{\@xp#1\@xp{\the\@envbody}}}%
\edef\process@envbody{\the\@envbody\@nx\end{\@currentvir}}%
\@envbody\@emptytoks \def\begin@stack{b}%
\begin@group
\@xp\let\csname\@currentvir\endcsname\long@collect@@body
\edef\process@envbody{\@xp\@nx\csname\@currentvir\endcsname}%
\process@envbody
}

```

`\long@addto@envbody` Adapted from `'s \addto@envbody`

```

\long\def\long@addto@envbody#1{%
  \toks@{#1}%
  \edef\@dtl@tmp{\the\@envbody\the\toks@}%
  \global\@envbody\@xp{\@dtl@tmp}%
}

```

g@collect@@body    Adapted from 's \collect@body

```

\long\def\long@collect@@body#1\end#2{%
  \protected@edef\begin@stack{%
    \long@push@begins#1\begin\end \@xp\@gobble\begin@stack
  }%
  \ifx\@empty\begin@stack
    \endgroup
    \@checkend{#2}%
    \long@addto@envbody{#1}%
  \else
    \long@addto@envbody{#1\end{#2}}%
  \fi
  \process@envbody
}

```

ong@push@begins    Adapted from 's \push@begins

```

\long\def\long@push@begins#1\begin#2{%
  \ifx\end#2\else b\@xp\long@push@begins\fi
}

```

### 1.2.1 General List Utilities

\DTLifinlist    `\DTLifinlist{<element>}{<list>}{<true part>}{<false part>}`

If *<element>* is contained in the comma-separated list given by *<list>*, then do *<true part>* otherwise do false part. (Does a one level expansion on *<list>*, but no expansion on *<element>*.)

```

\newcommand*{\DTLifinlist}[4]{%
  \def\@dtl@doifinlist##1,#1,##2\end@dtl@doifinlist{%
    \def\@before{##1}%
    \def\@after{##2}%
  }%
  \expandafter\@dtl@doifinlist\expandafter,#2,#1,\@nil
  \end@dtl@doifinlist
  \ifx\@after\@nnil
% not found
    #4%
  \else
% found
    #3%
  \fi
}

```

Lnumitemsinlist    \DTLnumitemsinlist{<list>}{<cmd>}

Counts number of non-empty elements in list and stores result in control sequence *<cmd>*.

```

\newcommand*{\DTLnumitemsinlist}[2]{%

```

```

\@dtl@tmpcount=0\relax
\@for\@dtl@element:=#1\do{%
  \ifdefempty{\@dtl@element}%
  {%
    {\advance\@dtl@tmpcount by 1\relax}%
  }%
\edef#2{\number\@dtl@tmpcount}%
}

```

```

\dtl@choplast \dtl@choplast{\<list>}{\<rest>}{\<last>}

```

Chops the last element off a comma separated list, putting the last element in the control sequence *<last>* and putting the rest in the control sequence *<rest>*. The control sequence *<list>* is unchanged. If the list is empty, both *<last>* and *<rest>* will be empty.

```

\newcommand*{\dtl@choplast}[3]{%

```

Set *<rest>* to empty:

```

\let#2\@empty

```

Set *<last>* to empty:

```

\let#3\@empty

```

Iterate through *<list>*:

```

\@for\@dtl@element:=#1\do{%
  \ifdefempty{#3}%
  {%

```

First iteration, don't set *<rest>*.

```

}%
{%
  \ifdefempty{#2}%
  {%

```

Second iteration, set *<rest>* to *<last>* (which is currently set to the previous value:

```

\expandafter\toks@\expandafter{#3}%
\edef#2{\the\toks@}%
}%
{%

```

Subsequent iterations, set *<rest>* to *<rest>*, *<last>* (*<last>* is currently set to the previous value):

```

\expandafter\toks@\expandafter{#3}%
\expandafter\@dtl@toks\expandafter{#2}%
\edef#2{\the\@dtl@toks,\the\toks@}%
}%
}%

```

Now set *<last>* to current element.

```

\let#3=\@dtl@element%
}%
}

```

`\dtl@chopfirst` `\dtl@chopfirst{<list>}{<first>}{<rest>}`

Chops first element off *<list>* and store in *<first>*. The remainder of the list is stored in *<rest>*. (*<list>* remains unchanged.)

```
\newcommand*\dtl@chopfirst[3]{%
  \let#2=\@empty
  \let#3=\@empty
  \@for\@dtl@element:=#1\do{%
    \let#2=\@dtl@element
    \@endfortrue
  }%
  \if@endfor
    \let#3=\@forremainder
  \fi
  \@endforfalse
}
```

I made a bit of a blunder here. `\dtl@sortlist` was supposed to work with commands like `\dtlcompare`, but those commands require three arguments, the first being the register in which to store the result. This contradicts the requirements of `\dtl@sortlist`. The “bug fix” in v2.26 fixed it to work with commands like `\dtlcompare`, but that broke the documented design (which breaks the glossaries package). The other problem is that `\dtl@insertinto` actually sorts in the reverse order. So v2.27 undoes the change from v2.26 to ensure backward compatibility and provides an alternative user-level command `\dltsortlist`, that’s designed to work with the three-argument handler commands like `\dtlcompare`.

`\dtl@sortlist` `\dtl@sortlist{<list>}{<criteria cmd>}`

Performs an insertion sort on *<list>*, where *<criteria cmd>* is a macro which takes two arguments *<a>* and *<b>*. *<criteria cmd>* must set the count register `\dtl@sortresult` to either `-1` (*<b>* less than *<a>*), `0` (*<a>* is equal to *<b>*) or `1` (*<b>* is greater than *<a>*.)

```
\newcommand{\dtl@sortlist}[2]{%
  \def\@dtl@sortedlist{}%
  \@for\@dtl@currentrow:=#1\do{%
    \expandafter\dtl@insertinto\expandafter
    {\@dtl@currentrow}{\@dtl@sortedlist}{#2}%
  }%
  \let#1=\@dtl@sortedlist
}
```

`\dtl@insertinto` `\dtl@insertinto{<element>}{<sorted-list>}{<criteria cmd>}`

Inserts *<element>* into the sorted list *<sorted-list>* according to the criteria given by *<criteria cmd>* (see above.)

```

\newcommand{\dtl@insertinto}[3]{%
  \def\@dtl@newsortedlist{%
    \@dtl@insertdonefalse
    \@for\dtl@srtelement:=#2\do{%
      \if@dtl@insertdone
        \expandafter\toks@\expandafter{\dtl@srtelement}%
        \edef\@dtl@newstuff{\the\toks@}%
      \else
        \expandafter#3\expandafter{\dtl@srtelement}{#1}%

        \ifnum\dtl@sortresult<0\relax
          \expandafter\toks@\expandafter{\dtl@srtelement}%
          \@dtl@toks{#1}%
          \edef\@dtl@newstuff{\the\@dtl@toks},{\the\toks@}%
          \@dtl@insertdonetrue
        \else
          \expandafter\toks@\expandafter{\dtl@srtelement}%
          \edef\@dtl@newstuff{\the\toks@}%
        \fi
      \fi
    \ifdefempty{\@dtl@newsortedlist}%
    {%
      \expandafter\toks@\expandafter{\@dtl@newstuff}%
      \edef\@dtl@newsortedlist{\the\toks@}%
    }%
    {%
      \expandafter\toks@\expandafter{\@dtl@newsortedlist}%
      \expandafter\@dtl@toks\expandafter{\@dtl@newstuff}%
      \edef\@dtl@newsortedlist{\the\toks@,\the\@dtl@toks}%
    }%
    \@endforfalse
  }%
  \ifdefempty{\@dtl@newsortedlist}%
  {%
    \@dtl@toks{#1}%
    \edef\@dtl@newsortedlist{\the\@dtl@toks}%
  }%
  {%
    \if@dtl@insertdone
    \else
      \expandafter\toks@\expandafter{\@dtl@newsortedlist}%
      \@dtl@toks{#1}%
      \edef\@dtl@newsortedlist{\the\toks@,\the\@dtl@toks}%
    \fi
  }%
  \global\let#2=\@dtl@newsortedlist
}

```

`\dtlsortlist` `\dtlsortlist{<list>}{<criteria cmd>}`

As `\dtl@sortlist` but the *<criteria>* command must take three arguments.

```
\newcommand{\dtlsortlist}[2]{%
\def\@dtl@sortedlist{}%
\@for\@dtl@currentrow:=#1\do{%
\expandafter\dtlinsertinto\expandafter
  {\@dtl@currentrow}{\@dtl@sortedlist}{#2}%
\@endforfalse}%
\let#1=\@dtl@sortedlist
}
```

`\dtlinsertinto` `\dtlinsertinto{<element>}{<sorted-list>}{<criteria cmd>}`

Inserts *<element>* into the sorted list *<sorted-list>* according to the criteria given by *<criteria cmd>*, which should be a command that takes three arguments  $\{\langle reg \rangle\}\{\langle A \rangle\}\{\langle B \rangle\}$ , where *<reg>* is a count register in which to store the result, *<A>* is the first element and *<B>* is the second element to compare.

```
\newcommand{\dtlinsertinto}[3]{%
\def\@dtl@newsortedlist{}%
\@dtl@insertdonefalse
\@for\dtl@srtelement:=#2\do{%
\expandafter\DTLifSubString\expandafter{\dtl@srtelement}{,}
{%
\expandafter\toks@\expandafter{\dtl@srtelement}%
\edef\dtl@srtelement{\the\toks@}%
}%
}%
}
\if\@dtl@insertdone

}%
{%
\@dtl@toks{#1}%
}%
\expandafter\toks@\expandafter{\dtl@srtelement}%
\edef\@dtl@newstuff{\the\@dtl@toks,\the\toks@}%
\fi
}
```

```

        \@dtl@insertdonetrue
    \else
        \expandafter\toks@\expandafter{\@dtl@srtelement}%
        \edef\@dtl@newstuff{{\the\toks@}}%
        \let\@dtl@newstuff\@dtl@srtelement
    \fi
\fi
\ifdefempty{\@dtl@newsortedlist}%
{%
    \expandafter\toks@\expandafter{\@dtl@newstuff}%
    \edef\@dtl@newsortedlist{\the\toks@}%
}%
{%
    \expandafter\toks@\expandafter{\@dtl@newsortedlist}%
    \expandafter\@dtl@toks\expandafter{\@dtl@newstuff}%
    \edef\@dtl@newsortedlist{\the\toks@,\the\@dtl@toks}%
}%
\@endforfalse
}%
\ifdefempty{\@dtl@newsortedlist}%
{%
    \DTLifSubString{#1}{,}%
    {%
        \@dtl@toks{{#1}}%
    }%
    {%
        \@dtl@toks{#1}%
    }%
    \edef\@dtl@newsortedlist{\the\@dtl@toks}%
}%
{%
    \if@dtl@insertdone
    \else
        \DTLifSubString{#1}{,}%
        {%
            \@dtl@toks{{#1}}%
        }%
        {%
            \@dtl@toks{#1}%
        }%
        \expandafter\toks@\expandafter{\@dtl@newsortedlist}%
        \edef\@dtl@newsortedlist{\the\toks@,\the\@dtl@toks}%
    \fi
}%
\global\let#2=\@dtl@newsortedlist
}

```

`\edtlinsertinto` `\edtlinsertinto{<element>}{<sorted-list>}{<criteria cmd>}`

First expands *<element>* before inserting into the list.

```
\newcommand*{\edtlinsertinto}[3]{%
  \protected@edef\dtl@srtelement{#1}%
  \expandafter\dtlinsertinto\expandafter{\dtl@srtelement}{#2}{#3}%
}
```

`@dtl@insertdone` Define conditional to indicate whether the new entry has been inserted into the sorted list.

```
\newif\if@dtl@insertdone
```

`\dtl@sortresult` Define `\dtl@sortresult` to be set by comparison macro.

```
\newcount\dtl@sortresult
```

## 1.2.2 General Token Utilities

`\toks@gput@right@cx` `\toks@gput@right@cx{<toks name>}{<stuff>}`

Globally appends stuff to token register `\<toks name>`

```
\newcommand{\toks@gput@right@cx}[2]{%
  \def\@toks@name{#1}%
  \edef\@dtl@stuff{#2}%
  \global\csname\@toks@name\endcsname\expandafter
  \expandafter\expandafter{\expandafter\the
  \csname\expandafter\@toks@name\expandafter\endcsname\@dtl@stuff}%
}
```

`concat@middle@cx` `\toks@gconcat@middle@cx{<toks name>}{<before toks>}{<stuff>}{<after toks>}`

Globally sets token register `\<toks name>` to the contents of *<before toks>* concatenated with *<stuff>* (expanded) and the contents of *<after toks>*

```
\newcommand{\toks@gconcat@middle@cx}[4]{%
  \def\@toks@name{#1}%
  \edef\@dtl@stuff{#3}%
  \global\csname\@toks@name\endcsname\expandafter\expandafter
  \expandafter\expandafter\expandafter
  \expandafter\expandafter{\expandafter\expandafter\expandafter
  \the\expandafter\expandafter\expandafter#2%
  \expandafter\@dtl@stuff\the#4}%
}
```

## 1.3 Locale Dependent Information

`@numgrpsepcount` Define count register to count the digits between the number group separators.  
`\newcount\@dtl@numgrpsepcount`

`\@dtl@decimal` The current decimal character is stored in `\@dtl@decimal`.  
`\newcommand*\@dtl@decimal}{.}`

`numbergroupchar` The current number group character is stored in `\@dtl@numbergroupchar`.  
`\newcommand*\@dtl@numbergroupchar}{,}`

`DTLsetnumberchars` `\DTLsetnumberchars{<number group char>}{<decimal char>}`

This sets the decimal character and number group characters.

```
\newcommand*\DTLsetnumberchars[2]{%
  \renewcommand*\@dtl@numbergroupchar{#1}%
  \renewcommand*\@dtl@decimal{#2}%
  \@dtl@construct@getnums
  \@dtl@construct@stripnumgrpchar{#1}%
}
```

`construct@getintfrac` `\@dtl@construct@getintfrac{<char>}`

This constructs the macros for extracting integer and fractional parts from a real number using the decimal character `<char>`.

`converttodecimal` `\DTLconverttodecimal{<num>}{<cmd>}`

`\DTLconverttodecimal` will convert locale dependent `<num>` a decimal number in a form that can be used in the macros defined in the `fp` package. The resulting number is stored in `<cmd>`. This command has to be redefined whenever the decimal and number group characters are changed as they form part of the command definitions.

```
\edef\@dtl@construct@getintfrac#1{%
  \noexpand\def\noexpand\@dtl@getintfrac##1#1##2\noexpand\relax{%
    \noexpand\@dtl@get@intpart{##1}%
    \noexpand\def\noexpand\@dtl@fracpart{##2}%
    \noexpand\ifempty{\noexpand\@dtl@fracpart}
    {%
      \noexpand\def\noexpand\@dtl@fracpart{0}%
    }%
  }%
```

```

\dtl@getfracpart##2\relax

decimaltolocalefrac Convert the fractional part (store in \@dtl@fracpart). \@dtl@choptrailingzeroes was
originally used, but this interfered with \dtlround. Removing \@dtl@choptrailingzeroes
caused a 'Number too big' error, so any fractional part over 2147483647 needs to be trimmed.
Unfortunately \ifnum#1>2147483647 also causes the 'Number too big' error, so count the
digits, and if the digit count exceeds 9, trim the excess.
\def\@dtl@decimaltolocalefrac#1.\relax{%

```

Set the defaults:

```

\@dtl@construct@getnums
\expandafter\@dtl@construct@stripnumgrpchar\expandafter
{\@dtl@numbergroupchar}

```

### 1.3.1 Currencies

`\@dtl@currencies`    `\@dtl@currencies` stores all known currencies.  
`\newcommand*{\@dtl@currencies}{\$, \pounds}`

`\newcurrencysymbol`    `\DTLaddcurrency{<symbol>}`

Adds `<symbol>` to the list of known currencies

```

\newcommand*{\DTLnewcurrencysymbol}[1]{%
  \expandafter\toks@\expandafter{\@dtl@currencies}%
  \@dtl@toks{#1}%
  \edef\@dtl@currencies{\the\@dtl@toks,\the\toks@}%
}

```

If any of the following currency commands have been defined, add them to the list:

```

\AtBeginDocument{%
  \@ifundefined{texteuro}{\DTLnewcurrencysymbol{\texteuro}}%
  \@ifundefined{textdollar}{\DTLnewcurrencysymbol{\textdollar}}%
  \@ifundefined{textstirling}{\DTLnewcurrencysymbol{\textstirling}}%
  \@ifundefined{textyen}{\DTLnewcurrencysymbol{\textyen}}%
  \@ifundefined{textwon}{\DTLnewcurrencysymbol{\textwon}}%
  \@ifundefined{textcurrency}{\DTLnewcurrencysymbol{\textcurrency}}%
  \@ifundefined{euro}{\DTLnewcurrencysymbol{\euro}}%
  \@ifundefined{yen}{\DTLnewcurrencysymbol{\yen}}%
}

```

standardize@currency

```
\@dtl@standardize@currency{<cmd>}
```

Substitutes the first currency symbol found in *<cmd>* with `\$`. This is used when testing text to determine if it is currency. The original currency symbol is stored in `\@dtl@org@currency`, so that it can be replaced later. If no currency symbol is found, `\@dtl@org@currency` will be empty.

```

\newcommand{\@dtl@standardize@currency}[1]{%
  \def\@dtl@org@currency{}%
  \@for\@dtl@thiscurrency:=\@dtl@currencies\do{%
    \expandafter\toks@\expandafter{\@dtl@thiscurrency}%
    \edef\@dtl@dosubs{\noexpand\DTLsubstitute{\noexpand#1}%
      {\the\toks@}{\noexpand\$}}%
    \@dtl@dosubs
    \ifdefempty{\@dtl@replaced}%
      {%
    }%
      {%
        \let\@dtl@org@currency=\@dtl@replaced
        \@endfortrue
      }%
    }%
  \@endforfalse
}

```

`\@dtl@currency` `\@dtl@currency` is set by `\DTLlocaltodecimal` and `\@dtl@checknumerical`. It is used by `\DTLdecimaltocurrency`. Set to `\$` by default.

```
\newcommand*{\@dtl@currency}{\$}
```

```
defaultcurrency \DTLsetdefaultcurrency{<symbol>} sets the default currency.
\newcommand*{\DTLsetdefaultcurrency}[1]{%
\renewcommand*{\@dtl@currency}{#1}%
}
```

## 1.4 Floating Point Arithmetic

The commands defined in this section all use the equivalent commands provided by the fp or pgfmath packages, but first convert the decimal number into the required format.

```
\DTLadd \DTLadd{<cmd>}{<num1>}{<num2>}
```

Sets  $\langle cmd \rangle = \langle num1 \rangle + \langle num2 \rangle$

```
\newcommand*{\DTLadd}[3]{%
\DTLconverttodecimal{#2}{\@dtl@numi}%
\DTLconverttodecimal{#3}{\@dtl@numii}%
\dtladd{\@dtl@tmp}{\@dtl@numi}{\@dtl@numii}%
\ifdefempty{\@dtl@replaced}%
{%
\DTLdecimaltolocale{\@dtl@tmp}{#1}%
}%
{%
\DTLdecimaltocurrency{\@dtl@tmp}{#1}%
}%
}
```

\DTLgadd Global version

```
\newcommand*{\DTLgadd}[3]{%
\DTLadd{\@dtl@tmpii}{#2}{#3}%
\global\let#1=\@dtl@tmpii
}
```

```
\DTLaddall \DTLaddall{<cmd>}{<num list>}
```

Sums all the values in  $\langle num list \rangle$  and stores in  $\langle cmd \rangle$  which must be a control sequence.

```
\newcommand*{\DTLaddall}[2]{%
\def\@dtl@sum{0}%
\@for\dtl@thisval:=#2\do{%

```

### 1.6.1 Determining Data Types

The control sequence `\@dtl@checknumerical` checks the data type of its argument, and sets `\@dtl@datatype` to 0 if the argument is a string, 1 if the argument is an integer or 2 if the argument is a real number. First define `\@dtl@datatype`:

```
\@dtl@datatype
```

```
\newcount\@dtl@datatype
```

```
\@dtl@checknumerical \@dtl@checknumerical{<arg>}
```

Checks if `<arg>` is numerical (includes decimal numbers, but not scientific notation.) Sets `\@dtl@datatype`, as described above.

```
\newcommand{\@dtl@checknumerical}[1]{%
  \@dtl@numgrpsepfalse
  \@dtl@ifsingle{#1}%
  {%
    \expandafter\toks@\expandafter{#1}%

```
\def\@dtl@checknumericalnoop#1\@nil#2{}
```

\DTLifnumerical `\DTLifnumerical{<arg>}{<true part>}{<false part>}`

Tests the first argument, if its numerical do second argument, otherwise do third argument.

```

\newcommand{\DTLifnumerical}[3]{%
\@dtl@checknumerical{#1}%
\ifnum\@dtl@datatype=0\relax#3\else#2\fi
}

```

\DTLifreal `\DTLifreal{<arg>}{<true part>}{<false part>}`

Tests the first argument, if it's a real number (not an integer) do second argument, otherwise do third argument.

```
\newcommand{\DTLifreal}[3]{%
  \@dtl@checknumerical{#1}%
  \ifnum\@dtl@datatype=2\relax #2\else #3\fi
}
```

`\DTLifint` `\DTLifint{<arg>}{<true part>}{<false part>}`

Tests the first argument, if it's an integer do second argument, otherwise do third argument.

```
\newcommand{\DTLifint}[3]{%
  \@dtl@checknumerical{#1}%
  \ifnum\@dtl@datatype=1\relax #2\else #3\fi
}
```

`\DTLifstring` `\DTLifstring{<arg>}{<true part>}{<false part>}`

Tests the first argument, if it's a string do second argument, otherwise do third argument.

```
\newcommand{\DTLifstring}[3]{%
  \@dtl@checknumerical{#1}%
  \ifnum\@dtl@datatype=0\relax #2\else #3\fi
}
```

`\DTLifcurrency` `\DTLifcurrency{<arg>}{<true part>}{<false part>}`

Tests the first argument, if it starts with the currency symbol do second argument, otherwise do third argument.

```
\newcommand{\DTLifcurrency}[3]{%
  \@dtl@checknumerical{#1}%
  \ifnum\@dtl@datatype=3\relax #2\else #3\fi
}
```

`\DTLifcurrencyunit` `\DTLifcurrencyunit{<arg>}{<symbol>}{<true part>}{<false part>}`

This tests if `<arg>` is currency, and uses the currency unit `<symbol>`. If true do third argument, otherwise do fourth argument.

```
\newcommand*{\DTLifcurrencyunit}[4]{%
```

```

\@dtl@checknumerical{#1}%
\ifnum\@dtl@datatype=3\relax
  \ifthenelse{\equal{\@dtl@org@currency}{#2}}{#3}{#4}%

  #4%
\fi
}

```

DTLifcasedatatype

```

\DTLifcasedatatype{<arg>}{<string case>}{<int case>}{<real case>}
{<currency case>}

```

If  $\langle arg \rangle$  is a string, do  $\langle string\ case \rangle$ , if  $\langle arg \rangle$  is an integer do  $\langle int\ case \rangle$ , if  $\langle arg \rangle$  is a real number, do  $\langle real\ case \rangle$ , if  $\langle arg \rangle$  is currency, do  $\langle currency\ case \rangle$ .

```

\newcommand{\DTLifcasedatatype}[5]{%
  \@dtl@checknumerical{#1}%
  \ifcase\@dtl@datatype
    #2% string
  \or
    #3% integer
  \or
    #4% number
  \or
    #5% currency
  \fi
}

```

DTLtestbothnumerical

```

\dtl@testbothnumerical{<arg1>}{<arg2>}

```

Tests if both arguments are numerical. This sets the conditional  $\if@dtl@condition$ .

```

\newcommand*{\dtl@testbothnumerical}[2]{%
  \dtl@ifsingle{#1}{%
    \edef\@dtl@tmp{#1}{%
    \def\@dtl@tmp{#1}}}%
  \expandafter\@dtl@checknumerical\expandafter{\@dtl@tmp}%
  \edef\@dtl@firsttype{\number\@dtl@datatype}%
  \dtl@ifsingle{#2}{%
    \edef\@dtl@tmp{#2}{%
    \def\@dtl@tmp{#2}}}%
  \expandafter\@dtl@checknumerical\expandafter{\@dtl@tmp}%
  \multiply\@dtl@datatype by \@dtl@firsttype\relax
  \ifnum\@dtl@datatype>0\relax
    \@dtl@conditiontrue
  \else
    \@dtl@conditionfalse
  \fi
}

```

```
\fi
}
```

`\DTLifnumlt` `\DTLifnumlt{<num1>}{<num2>}{<true part>}{<false part>}`

Determines if  $\langle \text{num1} \rangle < \langle \text{num2} \rangle$ . Both numbers need to have the decimal separator changed to a dot to ensure that it works with `\dtlifnumlt`

```
\newcommand*{\DTLifnumlt}[4]{%
  \DTLconverttodecimal{#1}{\@dtl@numi}%
  \DTLconverttodecimal{#2}{\@dtl@numii}%
  \dtlifnumlt{\@dtl@numi}{\@dtl@numii}%
  {%
    #3%
  }%
  {%
    #4%
  }%
}
```

`\dtlcompare` `\dtlcompare{<count>}{<string1>}{<string2>}`

Compares  $\langle \text{string1} \rangle$  and  $\langle \text{string2} \rangle$ , and stores the result in the count register  $\langle \text{count} \rangle$ . The result may be one of:

- 1 if  $\langle \text{string1} \rangle$  is considered to be less than  $\langle \text{string2} \rangle$
- 0 if  $\langle \text{string1} \rangle$  is considered to be the same as  $\langle \text{string2} \rangle$
- 1 if  $\langle \text{string1} \rangle$  is considered to be greater than  $\langle \text{string2} \rangle$

Note that for the purposes of string comparisons, commands within  $\langle \text{string1} \rangle$  and  $\langle \text{string2} \rangle$  are ignored, except for `\space` and `~`, which are both treated as a space (character code 32.) The following examples assume that the count register `\mycount` has been defined as follows:

```
\newcount\mycount
```

#### Examples:

1. `\dtlcompare{\mycount}{Z\"oe}{Zoe}\number\mycount`  
produces: -1, since the accent command is ignored.
2. `\dtlcompare{\mycount}{foo}{Foo}\number\mycount`  
produces: 1, since the comparison is case sensitive, however, note the following example:

3. `\dtlcompare{\mycount}{foo}{\uppercase{f}oo}\number\mycount`  
which produces: 1, since the `\uppercase` command is ignored.

4. You can “trick” `\dtlcompare` using a command which doesn’t output any text. Suppose you have defined the following command:

```
\newcommand*{\noopsort}[1]{}
```

then `\noopsort{a}foo` produces the text: foo, however the following

```
\dtlcompare{\mycount}{\noopsort{a}foo}{bar}\number\mycount
```

produces: -1, since the command `\noopsort` is disregarded when the comparison is made, so `\dtlcompare` just compares `{a}foo` with `bar`, and since `a` is less than `b`, the first string is considered to be less than the second string.

5. Note that this also means that:

```
\def\mystr{abc}%  
\dtlcompare{\mycount}{\mystr}{abc}\number\mycount
```

produces: -1, since the command `\mystr` is disregarded, which means that `\dtlcompare` is comparing an empty string with the string `abc`.

6. Spaces count in the comparison:

```
\dtlcompare{\mycount}{ab cd}{abcd}\number\mycount
```

produces: 0, but sequential spaces are treated as a single space:

```
\dtlcompare{\mycount}{ab cd}{ab cd}\number\mycount
```

produces: 0.

7. As usual, spaces following command names are ignored, so

```
\dtlcompare{\mycount}{ab\relax cd}{ab cd}\number\mycount
```

produces: -1.

8. `~` and `\space` are considered to be the same as a space:

```
\dtlcompare{\mycount}{ab cd}{ab~cd}\number\mycount
```

produces: 0.

```

```

Alphabetizing continues until a comma indicates inverted order. This assumes that an actual comma indicates that the comma forms part of the text (e.g. in a title of a play). Inversion commas should be indicated using commands such as `\datatoolpersoncomma`. There are three types of inverted order: people, places and subjects (concepts or objects). We also need to treat parenthetical material in a similar way. Find if the first string has an inverted order.

```

\expandafter\DTLsplitstring\expandafter

\let\DTLifFPclosedbetween\dtlifnumclosedbetween
```

## 1.6.2 ifthen Conditionals

The following commands provide conditionals `\DTLis...` which can be used in `\ifthenelse`.

<code>\dtl@testlt</code>	Command to test if first argument is less than second argument. If either argument is a string, a case sensitive string comparison is used instead. This sets <code>\if@dtl@condition</code> . <pre>\newcommand*\dtl@testlt}[2]{%   \DTLiflt{#1}{#2}{\@dtl@conditiontrue}{\@dtl@conditionfalse}% }</pre>
<code>\DTLisl</code>	Provide conditional command for use in <code>\ifthenelse</code> <pre>\newcommand*\DTLisl}[2]{%   \TE@throw\noexpand\dtl@testlt{#1}{#2}\noexpand\if@dtl@condition }</pre>
<code>\dtl@testiclt</code>	Command to test if first argument is less than second argument. If either argument is a string, a case insensitive string comparison is used instead. This sets <code>\if@dtl@condition</code> . <pre>\newcommand*\dtl@testiclt}[2]{%   \@sDTLiflt{#1}{#2}{\@dtl@conditiontrue}{\@dtl@conditionfalse}% }</pre>
<code>\DTLisil</code>	Provide conditional command for use in <code>\ifthenelse</code> <pre>\newcommand*\DTLisil}[2]{%   \TE@throw\noexpand\dtl@testiclt{#1}{#2}\noexpand\if@dtl@condition }</pre>
<code>\dtl@testgt</code>	Command to test if first argument is greater than second argument. This sets <code>\if@dtl@condition</code> . <pre>\newcommand*\dtl@testgt}[2]{%   \DTLifgt{#1}{#2}{\@dtl@conditiontrue}{\@dtl@conditionfalse}% }</pre>
<code>\DTLisgt</code>	Provide conditional command for use in <code>\ifthenelse</code> <pre>\newcommand*\DTLisgt}[2]{%   \TE@throw\noexpand\dtl@testgt{#1}{#2}\noexpand\if@dtl@condition }</pre>
<code>\dtl@testicgt</code>	Command to test if first argument is greater than second argument (ignores case). This sets <code>\if@dtl@condition</code> . <pre>\newcommand*\dtl@testicgt}[2]{%   \@sDTLifgt{#1}{#2}{\@dtl@conditiontrue}{\@dtl@conditionfalse}% }</pre>

`\DTLisigt` Provide conditional command for use in `\ifthenelse`

```

\newcommand*{\DTLisigt}[2]{%
  \TE@throw\noexpand\dtl@testicgt{#1}{#2}\noexpand\if@dtl@condition
}

```

`\dtl@testeq` Command to test if first argument is equal to the second argument. This sets `\if@dtl@condition`.

```

\newcommand*{\dtl@testeq}[2]{%
  \DTLifeq{#1}{#2}{\@dtl@conditiontrue}{\@dtl@conditionfalse}%
}

```

`\DTLiseq` Provide conditional command for use in `\ifthenelse`

```

\newcommand*{\DTLiseq}[2]{%
  \TE@throw\noexpand\dtl@testeq{#1}{#2}\noexpand\if@dtl@condition
}

```

`\dtl@testiceq` Command to test if first number is equal to the second number (ignores case). This sets `\if@dtl@condition`.

```

\newcommand*{\dtl@testiceq}[2]{%
  \@sDTLifeq{#1}{#2}{\@dtl@conditiontrue}{\@dtl@conditionfalse}%
}

```

`\DTLisieq` Provide conditional command for use in `\ifthenelse`

```

\newcommand*{\DTLisieq}[2]{%
  \TE@throw\noexpand\dtl@testiceq{#1}{#2}\noexpand\if@dtl@condition
}

```

`\DTLisSubString` Tests if second argument is contained in first argument.

```

\newcommand*{\DTLisSubString}[2]{%
  \TE@throw\noexpand\dtl@testifsubstring{#1}{#2}%
  \noexpand\if@dtl@condition
}

```

`\DTLisPrefix` Tests if first argument starts with second argument.

```

\newcommand*{\DTLisPrefix}[2]{%
  \TE@throw\noexpand\dtl@teststartswith{#1}{#2}%
  \noexpand\if@dtl@condition
}

```

`\DTLisinlist` Tests if first argument starts with second argument.

```

\newcommand*{\DTLisinlist}[2]{%
  \TE@throw\noexpand\dtl@testinlist{#1}{#2}%
  \noexpand\if@dtl@condition
}

```

`\dtl@testinlist`

```

\newcommand*{\dtl@testinlist}[2]{%
  \DTLifinlist{#1}{#2}{\@dtl@conditiontrue}{\@dtl@conditionfalse}%
}

```

`umclosedbetween` Command to test if first number lies between second and third numbers. (End points included, all arguments are fixed point numbers in standard format.) This sets `\if@dtl@condition`.

```

\newcommand*{\dtl@testnumclosedbetween}[3]{%
  \DTLifnumclosedbetween{#1}{#2}{#3}%
  {\@dtl@conditiontrue}{\@dtl@conditionfalse}%
}

```

Provide conditional command for use in `\ifthenelse`

`umclosedbetween`

```

\newcommand*{\DTLisnumclosedbetween}[3]{%
  \TE@throw\noexpand\dtl@testnumclosedbetween{#1}{#2}{#3}%
  \noexpand\if@dtl@condition
}

```

`tnumopenbetween` Command to test if first number lies between second and third numbers. (End points excluded, all arguments are fixed point numbers in standard format.) This sets `\if@dtl@condition`.

```

\newcommand*{\dtl@testnumopenbetween}[3]{%
  \DTLifnumopenbetween{#1}{#2}{#3}%
  {\@dtl@conditiontrue}{\@dtl@conditionfalse}%
}

```

`snumopenbetween` Provide conditional command for use in `\ifthenelse`

```

\newcommand*{\DTLisnumopenbetween}[3]{%
  \TE@throw\noexpand\dtl@testnumopenbetween{#1}{#2}{#3}%
  \noexpand\if@dtl@condition
}

```

`stclosedbetween` Command to test if first value lies between second and third values. (End points included, case sensitive.) This sets `\if@dtl@condition`.

```

\newcommand*{\dtl@testclosedbetween}[3]{%
  \DTLifclosedbetween{#1}{#2}{#3}%
  {\@dtl@conditiontrue}{\@dtl@conditionfalse}%
}

```

`isclosedbetween` Provide conditional command for use in `\ifthenelse`

```

\newcommand*{\DTLisclosedbetween}[3]{%
  \TE@throw\noexpand\dtl@testclosedbetween{#1}{#2}{#3}%
  \noexpand\if@dtl@condition
}

```

`sticlosedbetween` Command to test if first value lies between second and third values. (End points included, case ignored.) This sets `\if@dtl@condition`.

```

\newcommand*{\dtl@testiclosedbetween}[3]{%
  \@sDTLifclosedbetween{#1}{#2}{#3}%
  {\@dtl@conditiontrue}{\@dtl@conditionfalse}%
}

```

`\isiclosedbetween` Provide conditional command for use in `\ifthenelse`

```

\newcommand*{\DTLisiclosedbetween}[3]{%
  \TE@throw\noexpand\dtl@testiclosedbetween{#1}{#2}{#3}%
  \noexpand\if@dtl@condition
}

```

`\testopenbetween` Command to test if first value lies between second and third values. (End points excluded, case sensitive.) This sets `\if@dtl@condition`.

```

\newcommand*{\dtl@testopenbetween}[3]{%
  \DTLifopenbetween{#1}{#2}{#3}%
  {\@dtl@conditiontrue}{\@dtl@conditionfalse}%
}

```

`\DTLisopenbetween` Provide conditional command for use in `\ifthenelse`

```

\newcommand*{\DTLisopenbetween}[3]{%
  \TE@throw\noexpand\dtl@testopenbetween{#1}{#2}{#3}%
  \noexpand\if@dtl@condition
}

```

`\testiopenbetween` Command to test if first value lies between second and third values. (End points excluded, case ignored.) This sets `\if@dtl@condition`.

```

\newcommand*{\dtl@testiopenbetween}[3]{%
  \@sDTLifopenbetween{#1}{#2}{#3}%
  {\@dtl@conditiontrue}{\@dtl@conditionfalse}%
}

```

`\DTLisiopenbetween` Provide conditional command for use in `\ifthenelse`

```

\newcommand*{\DTLisiopenbetween}[3]{%
  \TE@throw\noexpand\dtl@testiopenbetween{#1}{#2}{#3}%
  \noexpand\if@dtl@condition
}

```

`\FPclosedbetween` Keep old command name for backwards compatibility:

```

\let\DTLisFPclosedbetween\DTLisnumclosedbetween

```

`\testFPopenbetween` Command to test if first number lies between second and third numbers. (End points excluded, all arguments are fixed point numbers in standard format.) This sets `\if@dtl@condition`.

```

\newcommand*{\dtl@testFPopenbetween}[3]{%
  \DTLifFPopenbetween{#1}{#2}{#3}%
  {\@dtl@conditiontrue}{\@dtl@conditionfalse}%
}

```

`\isFPopenbetween` Provide conditional command for use in `\ifthenelse`

```

\newcommand*{\DTLisFPopenbetween}[3]{%
  \TE@throw\noexpand\dtl@testFPopenbetween{#1}{#2}{#3}%
  \noexpand\if@dtl@condition
}

```

`\dtl@testFPislt` Command to test if first number is less than second number where both numbers are in standard format. This sets `\if@dtl@condition`.

```

\newcommand*{\dtl@testFPislt}[2]{%
  \dtlifnumlt{#1}{#2}%
  {%
    \@dtl@conditiontrue
  }%
  {%
    \@dtl@conditionfalse
  }%
}

```

`\DTLisFPlt` Provide conditional command for use in `\ifthenelse`

```

\newcommand*{\DTLisFPlt}[2]{%
  \TE@throw\noexpand\dtl@testFPislt{#1}{#2}%
  \noexpand\if@dtl@condition
}

```

`\dtl@testFPisgt` Command to test if first number is greater than second number where both numbers are in standard format. This sets `\if@dtl@condition`.

```

\newcommand*{\dtl@testFPisgt}[2]{%
  \dtlifnumgt{#1}{#2}%
  {%
    \@dtl@conditiontrue
  }%
  {%
    \@dtl@conditionfalse
  }%
}

```

`\DTLisFPgt` Provide conditional command for use in `\ifthenelse`

```

\newcommand*{\DTLisFPgt}[2]{%
  \TE@throw\noexpand\dtl@testFPisgt{#1}{#2}%
  \noexpand\if@dtl@condition
}

```

`\dtl@testFPiseq` Command to test if two numbers are equal, where both numbers are in standard decimal format

```

\newcommand*{\dtl@testFPiseq}[2]{%
  \dtlifnumeq{#1}{#2}%
  {%
    \@dtl@conditiontrue
  }%
  {%
    \@dtl@conditionfalse
  }%
}

```

`\DTLisFPeq` Provide conditional command for use in `\ifthenelse`

```

\newcommand*{\DTLisFPeq}[2]{%
  \TE@throw\noexpand\dtl@testFPiseq{#1}{#2}%
  \noexpand\if@dtl@condition
}

```

`\dtl@testFPislteq` Command to test if first number is less than or equal to second number where both numbers are in standard format. This sets `\if@dtl@condition`.

```

\newcommand*{\dtl@testFPislteq}[2]{%
  \dtl@ifnumlt{#1}{#2}%
  {%
    \@dtl@conditiontrue
  }%
  {%
    \@dtl@conditionfalse
  }%
  \if@dtl@condition
  \else
    \dtl@testFPiseq{#1}{#2}%
  \fi
}

```

`\DTLisFPlteq` Provide conditional command for use in `\ifthenelse`

```

\newcommand*{\DTLisFPlteq}[2]{%
  \TE@throw\noexpand\dtl@testFPislteq{#1}{#2}%
  \noexpand\if@dtl@condition
}

```

`\dtl@testFPisgteq` Command to test if first number is greater than or equal to second number where both numbers are in standard format. This sets `\if@dtl@condition`.

```

\newcommand*{\dtl@testFPisgteq}[2]{%
  \dtl@ifnumgt{#1}{#2}%
  {%
    \@dtl@conditiontrue
  }%
  {%
    \@dtl@conditionfalse
  }%
  \if@dtl@condition
  \else
    \dtl@testFPiseq{#1}{#2}%
  \fi
}

```

`\DTLisFPgteq` Provide conditional command for use in `\ifthenelse`

```

\newcommand*{\DTLisFPgteq}[2]{%
  \TE@throw\noexpand\dtl@testFPisgteq{#1}{#2}%
  \noexpand\if@dtl@condition
}

```

`\dtl@teststring` Command to test if argument is a string. This sets `\if@dtl@condition`  
`\newcommand*{\dtl@teststring}[1]{%`  
`\DTLifstring{#1}{\@dtl@conditiontrue}{\@dtl@conditionfalse}}`

`\DTLisstring` Provide conditional command for use in `\ifthenelse`  
`\newcommand*{\DTLisstring}[1]{%`  
`\TE@throw\noexpand\dtl@teststring{#1}\noexpand\if@dtl@condition}`

`\dtl@testnumerical` Command to test if argument is a numerical. This sets `\if@dtl@condition`  
`\newcommand*{\dtl@testnumerical}[1]{%`  
`\DTLifnumerical{#1}{\@dtl@conditiontrue}{\@dtl@conditionfalse}%`  
`}`

`\DTLisnumerical` Provide conditional command for use in `\ifthenelse`  
`\newcommand*{\DTLisnumerical}[1]{%`  
`\TE@throw\noexpand\dtl@testnumerical{#1}\noexpand\if@dtl@condition}`

`\dtl@testint` Command to test if argument is an integer. This sets `\if@dtl@condition`  
`\newcommand*{\dtl@testint}[1]{%`  
`\DTLifint{#1}{\@dtl@conditiontrue}{\@dtl@conditionfalse}}`

`\DTLisint` Provide conditional command for use in `\ifthenelse`  
`\newcommand*{\DTLisint}[1]{%`  
`\TE@throw\noexpand\dtl@testint{#1}\noexpand\if@dtl@condition}`

`\dtl@testreal` Command to test if argument is a real. This sets `\if@dtl@condition`  
`\newcommand*{\dtl@testreal}[1]{%`  
`\DTLifreal{#1}{\@dtl@conditiontrue}{\@dtl@conditionfalse}}`

`\DTLisreal` Provide conditional command for use in `\ifthenelse`  
`\newcommand*{\DTLisreal}[1]{%`  
`\TE@throw\noexpand\dtl@testreal{#1}\noexpand\if@dtl@condition}`

`\dtl@testcurrency` Command to test if argument is a currency. This sets `\if@dtl@condition`  
`\newcommand*{\dtl@testcurrency}[1]{%`  
`\DTLifcurrency{#1}{\@dtl@conditiontrue}{\@dtl@conditionfalse}}`

`\DTLiscurrency` Provide conditional command for use in `\ifthenelse`  
`\newcommand*{\DTLiscurrency}[1]{%`  
`\TE@throw\noexpand\dtl@testcurrency{#1}\noexpand\if@dtl@condition}`

`\dtl@testcurrencyunit` Command to test if argument is a currency with given unit. This sets `\if@dtl@condition`  
`\newcommand*{\dtl@testcurrencyunit}[2]{%`  
`\DTLifcurrencyunit{#1}{#2}{\@dtl@conditiontrue}{\@dtl@conditionfalse}}`

`\DTLiscurrencyunit` Provide conditional command for use in `\ifthenelse`  
`\newcommand*{\DTLiscurrencyunit}[2]{%`  
`\TE@throw\noexpand\dtl@testcurrencyunit{#1}{#2}%`  
`\noexpand\if@dtl@condition`  
`}`

## 1.7 Loops

`\dtlbreak` Break out of loop at the end of current iteration.

```
\newcommand*{\dtlbreak}{%
  \PackageError{datatool}{Can't break out of anything}{}%
}
```

`\dtlforint` `\dtlforint<ct>=<start>\to<end>\step <inc>\do{<body>}`

`<ct>` is a count register, `<start>`, `<end>` and `<inc>` are integers. Group if nested or use `\dtlgforint`. An infinite loop may result if `<inc>=0` and `<start> ≤ <end>` and `\dtlbreak` isn't used.

```
\long\def\dtlforint#1=#2\to#3\step#4\do#5{%
```

Make a copy of old version of break function

```
\let\@dtl@orgbreak\dtlbreak
\def\@dtl@endloophook{%
```

Setup break function for the loop (sets `<ct>` to `<end>` at the end of the current iteration).

```
\def\dtlbreak{\def\@dtl@endloophook{#1=#3}}%
```

Initialise `<ct>`

```
#1=#2\relax
```

Check if the steps are positive or negative.

```
\ifnum#4<0\relax
```

Counting down

```
\whiledo{\( #1>#3 \)\TE@or\ ( #1=#3 \)}%
{%
  #5%
  \@dtl@endloophook
  \advance#1 by #4\relax
}%
\else
```

Counting up

```
\whiledo{\( #1<#3 \)\TE@or\ ( #1=#3 \)}%
{%
  #5%
  \@dtl@endloophook
  \advance#1 by #4\relax
}%
\fi
```

Restore break function.

```
\let\dtlbreak\@dtl@orgbreak
}
```

l@foreach@level Count register to keep track of global nested loops.

```
\newcount\@dtl@foreach@level
```

```
\dtlforint <ct>=<start>\to<end>\step <inc>\do{<body>}
```

$\langle ct \rangle$  is a count register,  $\langle start \rangle$ ,  $\langle end \rangle$  and  $\langle inc \rangle$  are integers. An infinite loop may result if  $\langle inc \rangle = 0$  and  $\langle start \rangle \leq \langle end \rangle$  and `\dtlbreak` isn't used.

```
\long\def\dtlforint#1=#2\to#3\step#4\do#5{%
```

Initialise

```
\global#1=#2\relax
```

Increment level counter to allow for nested loops

```
\global\advance\@dtl@foreach@level by 1\relax
```

Set up end loop hook

```
\expandafter\global\expandafter
\let\csname @dtl@endhook@\the\@dtl@foreach@level\endcsname
\relax
```

Set up the break function: Copy current definition

```
\expandafter\global\expandafter
\let\csname @dtl@break@\the\@dtl@foreach@level\endcsname
\dtlbreak
```

Set up definition for this level (sets  $\langle ct \rangle$  to  $\langle end \rangle$  at the end of the current iteration).

```
\gdef\dtlbreak{\expandafter
\gdef\csname @dtl@endhook@\the\@dtl@foreach@level\endcsname{%
#1=#3}}%
```

check the direction

```
\ifnum#4<0\relax
```

Counting down

```
\whiledo{\( #1>#3 \)\TE@or\(#1=#3 \)}%
{%
#5%
\csname @dtl@endhook@\the\@dtl@foreach@level\endcsname
\global\advance#1 by #4\relax
}%
\else
```

Counting up (or 0 increments)

```
\whiledo{\( #1<#3 \)\TE@or\(#1=#3 \)}%
{%
#5%
\csname @dtl@endhook@\the\@dtl@foreach@level\endcsname
\global\advance#1 by #4\relax
}%
\fi
```

Restore break function

```
\expandafter\global\expandafter\let\expandafter\dtlbreak
\csname @dtl@break@\the\@dtl@foreach@level\endcsname
```

Decrement level counter

```
\global\advance\@dtl@foreach@level by -1\relax
}
```

dtlenvgforint Environment form (contents are gathered, so verbatim can't be used):

```
\newenvironment{dtlenvgforint}[1]%
{%
  \def\@dtlenvgforint@arg{#1}%
  \long@collect@body\@do@dtlenvgforint
}%
{}
\newcommand{\@do@dtlenvgforint}[1]{%
  \expandafter\dtlgforint\@dtlenvgforint@arg\do{#1}%
}
```

## 2 datatool-fp.sty

Definitions of fixed-point commands that use the fp package.

```
\NeedsTeXFormat{LaTeX2e}
\ProvidesPackage{datatool-fp}[2016/07/28 v2.27 (NLCT)]
```

Required packages:

```
\RequirePackage{xkeyval}
\RequirePackage{fp}
\RequirePackage{datatool-base}
```

`verbose` Switch fp messages on or off

```
\define@choicekey{datatool-fp}{verbose}[\val\nr]{true,false}[true]{%
  \ifcase\nr\relax
    \FPmessagestrue
  \or
    \FPmessagesfalse
  \fi
}
\let\ifFPmessages\ifdtlverbose
```

Process package options:

```
\ProcessOptionsX
```

Define commands that are needed before loading datatool-base:

```
\providecommand*{\@dtl@mathprocessor}{fp}
```

`\dtlifnumeq` `\dtlifnumeq{<num1>}{<num2>}{<true part>}{<false part>}`

Does *<true part>* if  $\langle num1 \rangle = \langle num2 \rangle$ , otherwise does *<false part>*. The numbers must use a full stop as the decimal character and no number group separator.

```
\newcommand*{\dtlifnumeq}[4]{%
  \FPifeq{#1}{#2}%
    #3%
  \else
    #4%
  \fi
}
```

If `verbose` option set, switch on `verbose` for `datatool-base` as well:

```
\let\ifdtlverbose\ifFPmessages
```

## 2.1 Comparison Commands

`\dtlifnumlt` `\dtlifnumlt{<num1>}{<num2>}{<true part>}{<false part>}`

Does *<true part>* if *<num1>* < *<num2>*, otherwise does *<false part>*. The numbers must use a full stop as the decimal character and no number group separator.

```
\newcommand*{\dtlifnumlt}[4]{%
  \FPiflt{#1}{#2}%
    #3%
  \else
    #4%
  \fi
}
```

`\dtlifnumgt` `\dtlifnumgt{<num1>}{<num2>}{<true part>}{<false part>}`

Does *<true part>* if *<num1>* > *<num2>*, otherwise does *<false part>*. The numbers must use a full stop as the decimal character and no number group separator.

```
\newcommand*{\dtlifnumgt}[4]{%
  \FPifgt{#1}{#2}%
    #3%
  \else
    #4%
  \fi
}
```

`ifnumopenbetween` `\dtlifnumopenbetween{<num>}{<min>}{<max>}{<true part>}{<false part>}`

Determines if *<min>* < *<num>* < *<max>* where all arguments are in standard fixed point notation.

```
\newcommand*{\dtlifnumopenbetween}[5]{%
  \let\@dtl@dovalue\relax
  \dtlifnumgt{#1}{#2}%
  {}%
  {%
    \def\@dtl@dovalue{#5}%
  }%
  \dtlifnumlt{#1}{#3}%
  {%
    \ifx\@dtl@dovalue\relax
```

```

        \def\@dtl@dovalue{#4}%
    \fi
}%
{%
    \def\@dtl@dovalue{#5}%
}%
\@dtl@dovalue
}

```

numclosedbetween

```
\dtlifnumclosedbetween{<num>}{<min>}{<max>}{<true part>}{<false part>}
```

Determines if  $\langle min \rangle \leq \langle num \rangle \leq \langle max \rangle$  where all arguments are in standard fixed point notation.

```

\newcommand*\dtlifnumclosedbetween}[5]{%
    \let\@dtl@dovalue\relax
    \dtlifnumgt{#1}{#2}%
    {}%
    {%
        \dtlifnumeq{#1}{#2}%
        {%
            \def\@dtl@dovalue{#4}%
        }%
        {%
            \def\@dtl@dovalue{#5}%
        }%
    }%
    \dtlifnumlt{#1}{#3}%
    {%
        \ifx\@dtl@dovalue\relax
            \def\@dtl@dovalue{#4}%
        \fi
    }%
    {%
        \dtlifnumeq{#1}{#3}%
        {%
            \def\@dtl@dovalue{#4}%
        }%
        {%
            \def\@dtl@dovalue{#5}%
        }%
    }%
    \@dtl@dovalue
}

```

## 2.2 Functions

`\dtladd` Adds two numbers using fp.

```
\newcommand*\dtladd}[3]{%
  \FPadd{#1}{#2}{#3}%
}
```

`\dtlsub` Subtracts two numbers using fp.

```
\newcommand*\dtlsub}[3]{%
  \FPsub{#1}{#2}{#3}%
}
```

`\dtlmul` Multiplies two numbers using fp.

```
\newcommand*\dtlmul}[3]{%
  \FPrmul{#1}{#2}{#3}%
}
```

`\dtldiv` Divides two numbers using fp.

```
\newcommand*\dtldiv}[3]{%
  \FPdiv{#1}{#2}{#3}%
}
```

`\dtlroot` Square root using fp.

```
\newcommand*\dtlroot}[2]{%
  \FProot{#1}{#2}%
}
```

`\dtlround` Rounds using fp.

```
\newcommand*\dtlround}[3]{%
  \FPrround{#1}{#2}{#3}%
}
```

`\dtltrunc` Truncates using fp. (Third argument is the number of digits.)

```
\newcommand*\dtltrunc}[3]{%
  \FPtrunc{#1}{#2}{#3}%
}
```

`\dtlclip`

```
\newcommand*\dtlclip}[2]{%
  \FPclip{#1}{#2}%
}
```

`\dtlmin` Minimum of two numbers using fp.

```
\newcommand*\dtlmin}[3]{%
  \FPmin{#1}{#2}{#3}%
}
```

`\dtlmax` Maximum of two numbers using fp.

```
\newcommand*\dtlmax}[3]{%
  \FPmax{#1}{#2}{#3}%
}
```

`\dtlabs` Absolute value using fp.

```
\newcommand*\dtlabs}[2]{%
  \FPabs{#1}{#2}%
}
```

`\dtlneg` Negative of a value using fp.

```
\newcommand*\dtlneg}[2]{%
  \FPneg{#1}{#2}%
}
```

## 3 datatool-pgfmath.sty

Definitions of fixed-point commands that use the pgfmath package.

```
\NeedsTeXFormat{LaTeX2e}
\ProvidesPackage{datatool-pgfmath}[2016/07/28 v2.27 (NLCT)]
```

Required packages:

```
\RequirePackage{xkeyval}
\RequirePackage{pgfrcs,pgfkeys,pgfmath}
```

Process package options:

```
\ProcessOptionsX
```

Define commands that are needed before loading datatool-base:

```
\providecommand*{\@dtl@mathprocessor}{pgfmath}
```

```
\dtlifnumeq \dtlifnumeq{<num1>}{<num2>}{<true part>}{<false part>}
```

Does *<true part>* if  $\langle num1 \rangle = \langle num2 \rangle$ , otherwise does *<false part>*. The numbers must use a full stop as the decimal character and no number group separator. The `\number0` part allows an empty argument to be treated as zero. (`\number` required to prevent a zero prefix indicating an octal number.)

```
\newcommand*{\dtlifnumeq}[4]{%
  \def\@dtl@truepart{#3}%
  \def\@dtl@falsepart{#4}%
  \pgfmathifthenelse{\number0#1==\number0#2}{%
    {\noexpand\@dtl@truepart}}{\noexpand\@dtl@falsepart}%
  \pgfmathresult
}
```

Load base package:

```
\RequirePackage{datatool-base}
```

### 3.1 Comparison Commands

```
\dtlifnumlt \dtlifnumlt{<num1>}{<num2>}{<true part>}{<false part>}
```

Does  $\langle true\ part \rangle$  if  $\langle num1 \rangle < \langle num2 \rangle$ , otherwise does  $\langle false\ part \rangle$ . The numbers must use a full stop as the decimal character and no number group separator.

```
\newcommand*{\dtlifnumlt}[4]{%
  \def\@dtl@truepart{#3}%
  \def\@dtl@falsepart{#4}%
  \pgfmathifthenelse{\number0#1 < \number0#2}%
    {"\noexpand\@dtl@truepart"}{"\noexpand\@dtl@falsepart"}%
  \pgfmathresult
}
```

`\dtlifnumgt` `\dtlifnumgt{\langle num1 \rangle}{\langle num2 \rangle}{\langle true\ part \rangle}{\langle false\ part \rangle}`

Does  $\langle true\ part \rangle$  if  $\langle num1 \rangle > \langle num2 \rangle$ , otherwise does  $\langle false\ part \rangle$ . The numbers must use a full stop as the decimal character and no number group separator.

```
\newcommand*{\dtlifnumgt}[4]{%
  \def\@dtl@truepart{#3}%
  \def\@dtl@falsepart{#4}%
  \pgfmathifthenelse{\number0#1 > \number0#2}%
    {"\noexpand\@dtl@truepart"}{"\noexpand\@dtl@falsepart"}%
  \pgfmathresult
}
```

`ifnumopenbetween` `\dtlifnumopenbetween{\langle num \rangle}{\langle min \rangle}{\langle max \rangle}{\langle true\ part \rangle}{\langle false\ part \rangle}`

Determines if  $\langle min \rangle < \langle num \rangle < \langle max \rangle$  where all numerical arguments are in standard fixed point notation.

```
\newcommand*{\dtlifnumopenbetween}[5]{%
  \def\@dtl@truepart{#4}%
  \def\@dtl@falsepart{#5}%
  \pgfmathifthenelse
    {(\number0#2 < \number0#1) \&\& (\number0#1 < \number0#3)}%
    {"\noexpand\@dtl@truepart"}{"\noexpand\@dtl@falsepart"}%
  \pgfmathresult
}
```

`numclosedbetween` `\dtlifnumclosedbetween{\langle num \rangle}{\langle min \rangle}{\langle max \rangle}{\langle true\ part \rangle}{\langle false\ part \rangle}`

Determines if  $\langle min \rangle \leq \langle num \rangle \leq \langle max \rangle$  where all numerical arguments are in standard fixed point notation.

```
\newcommand*{\dtlifnumclosedbetween}[5]{%
```

```

\def\@dtl@truepart{#4}%
\def\@dtl@falsepart{#5}%
\pgfmathifthenelse
{(\number0#2 <= \number0#1) && (\number0#1 <= \number0#3)}
{"\noexpand\@dtl@truepart"}{"\noexpand\@dtl@falsepart"}%
\pgfmathresult
}

```

## 3.2 Functions

`\dtladd` Adds two numbers using PGF math engine.

```

\newcommand*\dtladd}[3]{%
  \pgfmathadd{#2}{#3}%
  \let#1\pgfmathresult
}

```

`\dtlsub` Subtracts two numbers using PGF math engine.

```

\newcommand*\dtlsub}[3]{%
  \pgfmathsubtract{#2}{#3}%
  \let#1\pgfmathresult
}

```

`\dtlmul` Multiplies two numbers using PGF math engine.

```

\newcommand*\dtlmul}[3]{%
  \pgfmathmultiply{#2}{#3}%
  \let#1\pgfmathresult
}

```

`\dtldiv` Divides two numbers using PGF math engine.

```

\newcommand*\dtldiv}[3]{%
  \pgfmathdivide{#2}{#3}%
  \let#1\pgfmathresult
}

```

`\dtlroot` Square root using PGF math engine.

```

\newcommand*\dtlroot}[2]{%
  \pgfmathsqrt{#2}%
  \let#1\pgfmathresult
}

```

`\dtlround` Rounds using PGF math engine.

```

\newcommand*\dtlround}[3]{%
  \ifnum#3=0\relax
    \pgfmathparse{int(round(#2))}%
    \let#1\pgfmathresult
  \else
    \pgfmathparse{int(10^#3)}%
    \let\dtl@tmpshift\pgfmathresult
  \fi
}

```

Need to be careful not to trigger the dimension too large error, so this is a bit convoluted.

```
\pgfmathparse{int(floor(#2))}%
\let\dtl@int@round\pgfmathresult
\pgfmathparse{int(round((#2-\dtl@int@round) * \dtl@tmpshift))}%
```

This bit is awkward because simply dividing by multiples of 10 in pgfmath can cause rounding errors, so need to employ another method.

```
\dtl@tmpcount=0\relax
\expandafter\dtl@countdigits\pgfmathresult.\relax
\advance\dtl@tmpcount by -#3\relax
\def\dtl@intpart{}%
\def\dtl@fracpart{}%
\expandafter\dtl@gatherintfrac\pgfmathresult\relax
\edef\dtl@intpart{\number\numexpr\dtl@int@round
+\number0\dtl@intpart}%
\edef#1{\dtl@intpart.\dtl@fracpart}%
\fi
}
```

`\dtl@gatherintfrac`

```
\newcommand*\dtl@gatherintfrac[1]{%
\ifx\relax#1\relax
\else
\advance\dtl@tmpcount by -1\relax
\ifnum\dtl@tmpcount<0\relax
\edef\dtl@fracpart{\dtl@fracpart#1}%
\else
\edef\dtl@intpart{\dtl@intpart#1}%
\fi
\expandafter\dtl@gatherintfrac
\fi
}
```

`\dtltrunc` Truncates using PGF math engine. (Third argument is the number of digits.) This suffers from the same problems as `\dtlround`. Can cause dimension too large error or rounding errors.

```
\newcommand*\dtltrunc[3]{%
\ifnum#3=0\relax
\pgfmathparse{int(floor(#2))}%
\let#1\pgfmathresult
\else
\pgfmathparse{int(10^#3)}%
\let\dtl@tmpshift\pgfmathresult
```

Need to be careful not to trigger the dimension too large error, so this is a bit convoluted.

```
\pgfmathparse{int(floor(#2))}%
\let\dtl@int@trunc\pgfmathresult
\pgfmathparse{int(floor((#2-\dtl@int@trunc) * \dtl@tmpshift))}%
```

This bit is awkward because simply dividing by multiples of 10 in pgfmath can cause rounding errors, so need to employ another method.

```

\@dtl@tmpcount=0\relax
\expandafter\@dtl@countdigits\pgfmathresult.\relax
\advance\@dtl@tmpcount by -#3\relax
\def\@dtl@intpart{}%
\def\@dtl@fracpart{}%
\expandafter\@dtl@gatherintfrac\pgfmathresult\relax
\edef\@dtl@intpart{\number\numexpr\@dtl@int@trunc
+\number0\@dtl@intpart}%
\edef#1{\@dtl@intpart.\@dtl@fracpart}%
\fi
}

```

`\dtlclip` There isn't a clip in pgfmath as it seems to automatically clip.

```

\newcommand*\dtlclip[2]{%
\edef#1{#2}%
}

```

`\dtlmin` Minimum of two numbers using PGF math engine.

```

\newcommand*\dtlmin[3]{%
\pgfmathmin{#2}-{#3}%
\let#1\pgfmathresult
}

```

`\dtlmax` Maximum of two numbers using PGF math engine.

```

\newcommand*\dtlmax[3]{%
\pgfmathmax{#2}-{#3}%
\let#1\pgfmathresult
}

```

`\dtlabs` Absolute value using PGF math engine.

```

\newcommand*\dtlabs[2]{%
\pgfmathabs{#2}%
\let#1\pgfmathresult
}

```

`\dtlneg` Negative of a value using PGF math engine.

```

\newcommand*\dtlneg[2]{%
\pgfmathmul{-1}-{#2}%
\let#1\pgfmathresult
}

```

## 4 datatool.sty

### 4.1 Package Declaration

```
\NeedsTeXFormat{LaTeX2e}
\ProvidesPackage{datatool}[2016/07/28 v2.27 (NLCT)]
```

Load required packages:

```
\RequirePackage{xkeyval}
\RequirePackage{ifthen}
\RequirePackage{xfor}
\RequirePackage{substr}
\RequirePackage{etoolbox}
```

### 4.2 Package Options

`\@dtl@separator` The data separator character (comma by default) is stored in `\@dtl@separator`. This is the separator used in external data files, not in the  $\LaTeX$  code, which always uses a comma separator.

```
\newcommand*{\@dtl@separator}{,}
```

`\DTLsetseparator` `\DTLsetseparator{<char>}`

The sets `\@dtl@separator`, and constructs the relevant macros that require this character to be hardcoded into their definition.

```
\newcommand*{\DTLsetseparator}[1]{%
  \renewcommand*{\@dtl@separator}{#1}%
  \@dtl@construct@lopoffs
}
```

`\settabseparator` `\DTLsettabseparator` makes it easier to set a tab separator.

```
\gdef\DTLsettabseparator{%
  \catcode'\^^I12
  \DTLsetseparator{^^I}%
}
```

`\DTLmaketabspace`

```
\gdef\DTLmaketabspace{%
  \catcode'\^^I10\relax
}
\endgroup
```

`\@dtl@delimiter` The data delimiter character (double quote by default) is stored in `\@dtl@delimiter`. This is used in external data files, not in the  $\TeX$  code.

```
\begingroup
\catcode'\ "12\relax
\gdef\@dtl@delimiter{"}
\endgroup
```

`\DTLsetdelimiter` `\DTLsetdelimiter{<char>}`

This sets the delimiter.

```
\newcommand*\DTLsetdelimiter[1]{%
\renewcommand*\@dtl@delimiter{#1}%
\@dtl@construct@lopoffs
}
```

`construct@lopoff` `\@dtl@construct@lopoff<separator char><delimiter char>`

This defines

```
\@dtl@lopoff<first element><sep><rest of list>\to<cmd1><cmd2>
```

for the current separator and delimiter.

```
\edef\@dtl@construct@lopoff#1#2{%
\noexpand\long
\noexpand\def\noexpand\@dtl@lopoff#1##1##2\noexpand\to##3##4{%
\noexpand\ifx#2##1\noexpand\relax
\noexpand\@dtl@qlopoff#1##1##2\noexpand\to##3##4\relax
\noexpand\else
\noexpand\@dtl@lop@ff#1##1##2\noexpand\to##3##4\relax
\noexpand\fi
}%
}
```

`construct@qlopoff` `\@dtl@construct@qlopoff<separator char><delimiter char>`

This constructs `\@dtl@qlopoff` to be used when the entry is surrounded by the current delimiter value.

```
\edef\@dtl@construct@qlopoff#1#2{%
\noexpand\long
```

```
\noexpand\def\noexpand\@dtl@qlopoff#1#2##1#2#1##2\noexpand\to##3##4{%
\noexpand\def##4{##1}%
```

Replace any escaped delimiters

```
\noexpand\DTLsubstituteall{##4}{#2#2}{#2}%
\noexpand\edef\noexpand\@dtl@dosubs{%
\noexpand\noexpand\noexpand\DTLsubstituteall{\noexpand\noexpand##4}%
{\noexpand\expandafter\noexpand\noexpand\noexpand\csname#2\noexpand\endcsname#2}%
{\noexpand\expandafter\noexpand\noexpand\noexpand\csname#2\noexpand\endcsname}%
}%
\noexpand\@dtl@dosubs
\noexpand\def##3{#1##2}%
}%
}
```

construct@lop@ff

```
\@dtl@construct@lop@ff<separator char>
```

This constructs \@dtl@lop@ff to be used when the entry isn't surrounded by the delimiter.

```
\edef\@dtl@construct@lop@ff#1{%
\noexpand\long
\noexpand\def\noexpand\@dtl@lop@ff#1##1#1##2\noexpand\to##3##4{%
\noexpand\def##4{##1}%
\noexpand\def##3{#1##2}%
}%
}
```

construct@lop@ffs

```
\@dtl@construct@lop@ffs
```

This constructs all the lopoff macros using the given separator and delimiter characters.

```
\newcommand{\@dtl@construct@lop@ffs}{%
\edef\@dtl@chars{\@dtl@separator}\@dtl@delimiter}%
\expandafter\@dtl@construct@lop@ff\@dtl@chars
\expandafter\@dtl@construct@qlop@ff\@dtl@chars
\expandafter\@dtl@construct@lop@ff\expandafter{\@dtl@separator}%
}
```

separator Define separator used in external data files.

```
\define@key{datatool.sty}{separator}{%
\DTLsetseparator{#1}%
}
```

delimiter Define delimiter used in external data files.

```
\define@key{datatool.sty}{delimiter}{%
\DTLsetdelimiter{#1}%
}
```

verbose

```
\define@boolkey{datatool.sty}[dtl]{verbose}[true]{}
```

math Determine whether to use fp or pgfmath for the arithmetic commands. The default is to use fp.

```
\define@choicekey{datatool.sty}{math}[\val\nr]{fp,pgfmath}{%
  \renewcommand*\@dtl@mathprocessor{#1}%
}
\providecommand*\@dtl@mathprocessor{fp}
```

Process package options:

```
\ProcessOptionsX
```

Set the defaults:

```
\@dtl@construct@lopoffs
```

Load base package:

```
\RequirePackage{datatool-base}
```

\DTLpar Many of the commands used by this package are short commands. This means that you can't use \par in the data. This command needs to be robust so it doesn't get expanded when written to a file. We also can't just use a synonym for @@par because it may be used in a context where \par has a different meaning to @@par.

```
\DeclareRobustCommand{\DTLpar}{\par}
```

## 4.3 Defining New Databases

As from v2.0, the internal structure of the database has changed to make it more efficient.<sup>1</sup> The database is now stored in a token register instead of a macro. Each row is represented as:

```
\db@row@elt@w\db@row@id@w<row idx>\db@row@id@end@<column data>\db@row@id@w
<row idx>\db@row@id@end@\db@row@elt@end@
```

where *<row idx>* is the row index and *<column data>* is the data for each column in the row.

Each column for a given row is stored as:

```
\db@col@id@w<column idx>\db@col@id@end@\db@col@elt@w<value>\db@col@elt@end@
\db@col@id@w<column idx>\db@col@id@end@
```

where *<column idx>* is the column index and *<value>* is the entry for the given column and row.

Each row only has an associated index, but columns have a unique identifying key as well as an associated index. Columns also have an associated data type which may be: 0 (column contains strings), 1 (column contains integers), 2 (column contains real numbers), 3 (column contains currency) or *<empty>* (column contains no data). Since the key sometimes has to be expanded, a header is also available in the event that the user wants to use \DTLdisplaydb or \DTLdisplaylongdb and requires a column header that would cause problems if used as

---

<sup>1</sup>Thanks to Morten Høgholm for the suggestion.

a key. The general column information is stored in a token register where each column has information stored in the form:

```
\db@plist@elt@w\db@col@id@w<index>\db@col@id@end@\db@key@id@w<key>\db@key@id@end@
\db@type@id@w<type>\db@type@id@end@\db@header@id@w<type>\db@header@id@end@
\db@col@id@w<index>\db@col@id@end@\db@plist@elt@end@
```

The column name (<key>) is mapped to the column index using \dtl@ci@<db>@<key> where <db> is the database name.

```
\DTLnewdb \DTLnewdb{<db name>}
```

Initialises a database called <name>.

```
\newcommand*{\DTLnewdb}[1]{%
```

Check if there is already a database with this name.

```
\DTLifdbexists{#1}%
```

```
{%
```

```
\PackageError{datatool}{Database ‘#1’ already exists}{}%
```

```
}%
```

```
{%
```

Define new database. Add information message if in verbose mode.

```
\dtl@message{Creating database ‘#1’}%
```

Define token register used to store the contents of the database.

```
\expandafter\newtoks\csname dtldb@#1\endcsname
```

Define token register used to store the column header information.

```
\expandafter\newtoks\csname dtlkeys@#1\endcsname{}%
```

Define count register used to store the row count.

```
\expandafter\newcount\csname dtlrows@#1\endcsname
```

Define count register used to store the column count.

```
\expandafter\newcount\csname dtlcols@#1\endcsname
```

```
}%
```

```
}
```

```
\DTLcleardb \DTLcleardb{<db name>}
```

Clears the database. (Makes it empty, but still defined.)

```
\newcommand*{\DTLcleardb}[1]{%
```

```
\DTLifdbexists{#1}%
```

```
{%
```

```
\dtlforeachkey(\@dtl@key,\@dtl@col,\@dtl@type,\@dtl@head)\in{#1}\do
```

## 4.4 Accessing Data

`\DTLassign` `\DTLassign{<db>}{<row idx>}{<assign list>}`

Assigns values given in *<assign list>* for row *<row idx>* in database *<db>*. (Where *<assign list>* is in the same form as in `\DTLforeach`)

```
\newcommand*{\DTLassign}[3]{%
\DTLifdbexists{#1}
{%
```

Grouped in the event that `\dtlcurrentrow` is already in use. (Assignments in `\@dtl@assign` are global.)

```
{%
\dtlgetrow{#1}{#2}%
\@dtl@assign{#3}{#1}%
}%
}%
{%
```

```

\PackageError{datatool}{Database ‘#1’ doesn’t exist}{}%
}%
}

```

assignfirstmatch `\DTLassignfirstmatch{<db>}{<col key>}{<value>}{<assign list>}`

Applies the assignment list to the first row that has the given value in the given column. (Value must be expanded.)

```

\newcommand*{\DTLassignfirstmatch}[4]{%
\dtl@assignfirstmatch{#3}{#1}{#2}{#4}%
}

```

assignfirstmatch `\xDTLassignfirstmatch{<db>}{<col key>}{<value>}{<assign list>}`

Applies the assignment list to the first row that has the given value in the given column. (Performs *one level* expansion on <value>.)

```

\newcommand*{\xDTLassignfirstmatch}[4]{%
\protected@edef\@dtl@asg@value{\expandonce{#3}}%
\expandafter\dtl@assignfirstmatch\expandafter
{\@dtl@asg@value}{#1}{#2}{#4}%

```

\dtlcurrentrow

Define token register to store current row.

```
\newtoks\dtlcurrentrow
```

\dtlbeforerow

Define token register to store everything before the current row.

```
\newtoks\dtlbeforerow
```

\dtlafterrow

Define token register to store everything after the current row.

```
\newtoks\dtlafterrow
```

\dtlgetrow

```
\dtlgetrow{<db>}{<row idx>}
```

Gets row with index  $\langle row\ idx \rangle$  from database named  $\langle db \rangle$  and stores the row in `\dtlcurrentrow`, the preceding rows in `\dtlbeforerow` and the following rows in `\dtlafterrow`. The row index,  $\langle row\ idx \rangle$ , is stored in `\dtlrownum` and the database name,  $\langle db \rangle$ , is stored in `\dtldbname`. This assumes that the given row exists.

```
\newcommand*\dtlgetrow}[2]{%
  \dtlrownum=#2\relax
  \edef\dtldbname{#1}%
  \expandafter\toks@\expandafter=\csname dtldb@#1\endcsname
  \edef\@dtl@dogetrow{\noexpand\dtlgetrow{\the\toks@}{\number#2}}%
  \@dtl@dogetrow
}
```

`\dtlgetrowforvalue` `\edtlgetrowforvalue{ $\langle db \rangle$ }{ $\langle column\ idx \rangle$ }{ $\langle value \rangle$ }`

A version of `\dtlgetrowforvalue` that expands its arguments.

```
\newcommand{\edtlgetrowforvalue}[3]{%
  \protected@edef\@dtl@dogetrowforvalue{%
    \noexpand\dtlgetrowforvalue{#1}{#2}{#3}}%
  \@dtl@dogetrowforvalue
}
```

`\DTLfetch` `\DTLfetch{ $\langle db\ name \rangle$ }{ $\langle column1\ name \rangle$ }{ $\langle column1\ value \rangle$ }{ $\langle column2\ name \rangle$ }`

Fetches and displays the value for  $\langle column2\ name \rangle$  in the first row where the value of  $\langle column1\ name \rangle$  is  $\langle column1\ value \rangle$ . Note that all arguments are expanded.

```
\newcommand{\DTLfetch}[4]{%
  \edtlgetrowforvalue{#1}{\dtlcolumnindex{#1}{#2}}{#3}%
  \dtlgetentryfromcurrentrow{\dtlcurrentvalue}{\dtlcolumnindex{#1}{#4}}%
  \dtlcurrentvalue
}
```

`\dtlgetrowforvalue` `\dtlgetrowforvalue{ $\langle db \rangle$ }{ $\langle column\ idx \rangle$ }{ $\langle value \rangle$ }`

Like `\dtlgetrow`, but gets the row where the entry in column  $\langle column\ index \rangle$  matches  $\langle value \rangle$ . Produces an error if row not found.

```
\newcommand*\dtlgetrowforvalue}[3]{%
  \dtlgetrowindex{\dtl@rowidx}{#1}{#2}{#3}%
  \ifx\dtl@rowidx\dtlnovalue
    \PackageError{datatool}{No row found in database ‘#1’ for
      column ‘\number#2’ matching ‘#3’}{}%
  \fi

\DTLforeach `\DTLforeach[<conditions>]{<db name>}{<values>}{<text>}`

For each row of data in the database given by <db name>, do <text>, if the specified conditions are satisfied. The argument {<values>} is a comma separated list of <cmd>=<key> pairs. At the start of each row, each of the commands in this list are set to the value of the entry with the corresponding key <key>. (\gdef is used to ensure \DTLforeach works in a tabular environment.) The database may be edited in the unstarred version, in the starred version the database is read only.

```
\newcommand*{\DTLforeach}{\@ifstar\@sDTLforeach\@DTLforeach}
```

\@DTLforeach \@DTLforeach is the unstarred version of \DTLforeach. The database is reconstructed to allow for rows to be edited. Use the starred version for faster access.

```
\def\@dtl@loop@body{#2}%  
\@dtl@loop@body  
}%  
\fi  
}
```

## 4.6 DTLforeach Conditionals

The following conditionals are only meant to be used within \DTLforeach as they depend on the counter DTLrow $\langle n \rangle$ .

\DTLiffirstrow `\DTLiffirstrow{<true part>}{<>false part>}`

Test if the current row is the first row. (This takes *<condition>*, the optional argument of \DTLforeach, into account, so it may not correspond to row 1 of the database.) Can only be used in \DTLforeachrow.

```
\newcommand{\DTLiffirstrow}[2]{%  
  \PackageError{datatool}{\string\DTLiffirstrow\space can only  
    be used inside \string\DTLforeach}{}%  
}
```

\DTLiflastrow `\DTLiflastrow{<true part>}{<>false part>}`

Checks if the current row is the last row of the database. It doesn't take the condition (the optional argument of \DTLforeach) into account, so its possible it may never do *<true part>*, as the last row of the database may not meet the condition. It is therefore not very useful and is confusing since it behaves differently to \DTLiffirstrow which does take the condition

into account, so I have removed its description from the main part of the manual. If you need to use the optional argument of `\DTLforeach`, you will first have to iterate through the database to count up the number of rows which meet the condition, and then do another pass, checking if the current row has reached that number.

```
\newcommand{\DTLiflastrow}[2]{%
  \PackageError{datatool}{\string\DTLiflastrow\space can only
    be used inside \string\DTLforeach}{}%
}
```

`\DTLifoddrow` `\DTLifoddrow{<true part>}{<false part>}`

Determines whether the current row is odd (takes the optional argument of `\DTLforeach` into account.)

```
\newcommand{\DTLifoddrow}[2]{%
  \PackageError{datatool}{\string\DTLifoddrow\space can only
    be used inside \string\DTLforeach}{}%
}
```

## 4.7 Displaying Database

This section defines commands to display the entire database in a tabular or longtable environment.

<code>\dtlbetweencols</code>	This specifies what to put between the column alignment specifiers. <code>\newcommand*{\dtlbetweencols}{}%</code>
<code>\dtlbeforecols</code>	This specifies what to put before the first column alignment specifier. <code>\newcommand*{\dtlbeforecols}{}%</code>
<code>\dtlaftercols</code>	This specifies what to put after the last column alignment specifier. <code>\newcommand*{\dtlaftercols}{}%</code>
<code>\dtlstringalign</code>	Alignment character for columns containing strings <code>\newcommand*{\dtlstringalign}{l}</code>
<code>\dtlintalign</code>	Alignment character for columns containing integers <code>\newcommand*{\dtlintalign}{r}</code>
<code>\dtlrealalign</code>	Alignment character for columns containing real numbers <code>\newcommand*{\dtlrealalign}{r}</code>
<code>\dtlcurrencyalign</code>	Alignment character for columns containing currency numbers <code>\newcommand*{\dtlcurrencyalign}{r}</code>

`\dtladdalign` `\dtladdalign{<cs>}{<type>}{<col num>}{<max cols>}`

Adds tabular column alignment character to `<cs>` for column `<col num>` which contains data type `<type>`.

```
\newcommand*{\dtladdalign}[4]{%
  \ifnum#3=1\relax
    \protected@edef#1{\dtlbeforecols}%
  \else
    \protected@edef#1{#1\dtlbetweencols}%
  \fi
  \ifstrempy{#2}%
  {%
    \protected@edef#1{#1c}%
  }%
  {%
    \ifcase#2\relax
      string
        \protected@edef#1{#1\dtlstringalign}%
      \or
      integer
        \protected@edef#1{#1\dtlintalign}%
      \or
      real number
        \protected@edef#1{#1\dtlrealalign}%
      \or
      currency
        \protected@edef#1{#1\dtlcurrencyalign}%
      \else
      Unknown type
        \protected@edef#1{#1c}%
        \PackageError{datatool}{Unknown data type ‘#2’}{}%
      \fi
    }%
    \ifnum#3=#4\relax
      \protected@edef#1{#1\dtlaftercols}%
    \fi
  }
}
```

`\dtlheaderformat` `\dtlheaderformat{<text>}`

Specifies how to format the column title.

```
\newcommand*{\dtlheaderformat}[1]{\null\hfil\textbf{#1}\hfil\null}
```

<code>\dtlstringformat</code>	<code>\dtlstringformat{&lt;text&gt;}</code>	Specifies how to format entries in columns with string data type. <code>\newcommand*{\dtlstringformat}[1]{#1}</code>
<code>\dtlintformat</code>	<code>\dtlintformat{&lt;text&gt;}</code>	Specifies how to format entries in columns with integer data type. <code>\newcommand*{\dtlintformat}[1]{#1}</code>
<code>\dtlrealformat</code>	<code>\dtlrealformat{&lt;text&gt;}</code>	Specifies how to format entries in columns with real data type. <code>\newcommand*{\dtlrealformat}[1]{#1}</code>
<code>\dtlcurrencyformat</code>	<code>\dtlcurrencyformat{&lt;text&gt;}</code>	Specifies how to format entries in columns with currency data type. <code>\newcommand*{\dtlcurrencyformat}[1]{#1}</code>
<code>\dtldisplaystarttab</code>	Indicates what to do just after <code>\begin{tabular}{&lt;column specs&gt;}</code> (e.g. <code>\hline</code> ). <code>\newcommand*{\dtldisplaystarttab}{}</code>	
<code>\dtldisplayendtab</code>	Indicates what to do just before <code>\end{tabular}</code> . <code>\newcommand*{\dtldisplayendtab}{}</code>	
<code>\dtldisplayafterhead</code>	Indicates what to do after the header row, before the first row of data. <code>\newcommand*{\dtldisplayafterhead}{}</code>	
<code>\dtldisplayvalign</code>	Stores the vertical alignment specifier for the tabular environment used in <code>\DTLdisplaydb</code> <code>\newcommand*{\dtldisplayvalign}{c}</code>	
<code>\dtldisplaystartrow</code>	Indicates what to do at the start of each row (not including the header row or the first row of data). <code>\newcommand*{\dtldisplaystartrow}{}</code>	
<code>\dtldisplaycr</code>	<code>\newcommand{\dtldisplaycr}{\tabularnewline}</code>	

```
\DTLdisplaydb \DTLdisplaydb[<omit list>]{<db>}
```

Displays the database *<db>* in a tabular environment.

```

## 4.9 Database Functions

`\DTLsumforkeys` `\DTLsumforkeys[<condition>][<assign list>]{<db list>}{<key list>}{<cmd>}`

Sums all entries for key *<key>* over all databases listed in *<db list>*, and stores in *<cmd>*, which must be a control sequence. The first argument *<condition>* is the same as that for `\DTLforeach`. The second optional argument provides an assignment list to pass to `\DTLforeach` in case extra information is needed by *<condition>*.

```
\newcommand*\DTLsumforkeys[1][\boolean{true}]\and
\DTLisnumerical{\DTLthisval}] {%
\def\@dtl@cond{#1}%
\@dtlsumforkeys
}
```

`\@dtlsumforkeys`

```
\newcommand*\@dtlsumforkeys[4][ ] {%
\def#4{0}%
```

Iterate over all the listed data bases

```
\@for\@dtl@db@name:=#2\do{%
```

Iterate through this database (using read only version)

```
\@sDTLforeach{\@dtl@db@name}%
{#1}% assignment list
{%
```

Iterate through key list.

```
\@for\@dtl@key:=#3\do{%
\@sdtl@getcolumnindex{\@dtl@col}{\@dtl@db@name}{\@dtl@key}%
\dtlcurrentrow=\expandafter{\dtl@thisrow}%
\dtlgetentryfromrow{\DTLthisval}{\@dtl@col}{\dtlcurrentrow}%
\expandafter\ifthenelse\expandafter{\@dtl@cond}%
{\DTLadd{#4}{#4}{\DTLthisval}}{%
}%
}%
}%
}
```

`\DTLsumcolumn` `\DTLsumcolumn{<db>}{<key>}{<cmd>}`

Quicker version of `\DTLsumforkeys` that just sums over one column (specified by *<key>*) for a single database (specified by *<db>*) and stores the result in *<cmd>*.

```
\newcommand*\DTLsumcolumn[3] {%

## 4.10 Sorting Databases

`\@dtl@list` Token register to store data when sorting.  
`\newtoks\@dtl@list`

```
\DTLsort \DTLsort[<replacement keys>]{<sort criteria>}{<db name>}
```

Sorts database *<db name>* according to *{<sort criteria>}*, which must be a comma separated list of keys, and optionally *=<order>*, where *<order>* is either ascending or descending. The optional argument is a list of keys to uses if the given key has a null value. The starred version uses a case insensitive string comparison.

```
\newcommand*\DTLsort{\@ifstar\@sDTLsort\@DTLsort}
```

`\@DTLsort` Unstarred (case sensitive) version.  
`\newcommand{\@DTLsort}[3][ ]{%`  
`\dtlsort[#1]{#2}{#3}{\dtlcompare}%`  
`}`

```
\@sDTLsort Starred (case insensitive) version.
\newcommand*{\@sDTLsort}[3] [] {%
  \dtlsort[#1]{#2}{#3}{\dtlicompare}%
}
```

```
\dtlsort \dtlsort[<replacement keys>]{<sort criteria>}{<db name>}{<handler>}
```

More general version where user supplies a handler for the comparison.

```
\newcommand{\dtlsort}[4] [] {%

\string\csname\space dtl@ci@#1\@dtl@key\string\endcsname
{\csname dtl@ci@#1\@dtl@key\endcsname}\expandafter\@gobble\string\}%
\expandafter\write\expandafter\@dtl@write\expandafter{\dtl@tmp}%}
```

```

}%
End the scope for \makeatletter:
\protected@write{\@dtl@write}{\string\egroup}%
End current scope:
}%
Provide a means to keep track of the last loaded file:
\protected@write{\@dtl@write}{\string\def\string\dtllastloadeddb{#1}}%
Close output file
\closeout\@dtl@write
}%
{%
\PackageError{datatool}{Can't save database '#1': no such
database}{}%
}%
}

```

## 4.12 Loading a database from an external file

\DTLloaddbtex `\DTLloaddbtex{<cs>}{<file>}`

Load a .dbtex file and assign the database name to the control sequence <cs>. Checks the file name exists and the control sequence doesn't exist.

```

\newcommand*{\DTLloaddbtex}[2]{%
\IfFileExists{#2}%
{%
\input{#2}%
\ifdef#1%
{%
\PackageError{datatool}{Command \string#1\space is already defined}%
{}}%
}%
{%
\let#1\dtllastloadeddb
}%
}%
{%
\PackageError{datatool}{File '#2' doesn't exist.}{}%
}%
}

```

\@dtl@read

\newread\@dtl@read

`\dtl@entrycr` Keep track of current column in data file  
`\newcount\dtl@entrycr`

`\ifdtlnoheader` The noheader option indicates that the file doesn't have a header row.  
`\define@boolkey{loaddb}[dtl]{noheader}[true]{}%`

`\ifdtlautokeys` Assign the default keys even if a header row is supplied.  
`\define@boolkey{loaddb}[dtl]{autokeys}[true]{}%`  
`\dtlautokeysfalse`

The keys option specifies the list of keys in the same order as the columns in the data file. Each key is stored in `\@dtl@inky@<n>` where `<n>` is the roman numeral representation of the current column.

```
\define@key{loaddb}{keys}{%
  \dtl@entrycr=0\relax
  \@for\@dtl@key:=#1\do
  {%
    \advance\dtl@entrycr by 1\relax
    \expandafter
    \edef\csname @dtl@inky@\romannumeral\dtl@entrycr\endcsname{%
      \@dtl@key}%
  }%
}
```

The headers option specifies the list of headers in the same order as the columns in the data file.

```
\define@key{loaddb}{headers}{%
  \dtl@entrycr=0\relax
  \@for\@dtl@head:=#1\do
  {%
    \advance\dtl@entrycr by 1\relax
    \toks@=\expandafter{\@dtl@head}%
    \expandafter
    \edef\csname @dtl@inhd@\romannumeral\dtl@entrycr\endcsname{%
      \the\toks@}%
  }%
}
```

The following is supplied in a patch by Bruno Le Floch:

```
\newcount{\dtl@omitlines}
\define@key{loaddb}{omitlines}{\dtl@omitlines=#1\relax}
```

`\dtldefaultkey` Default key to use if none specified (column index will be appended).  
`\newcommand*{\dtldefaultkey}{Column}`

`\@dtl@readline` `\@dtl@readline{<file reg>}{<cs>}`

Reads line from *<file reg>*, trims end of line character and stores in *<cs>*.

```
\newcommand*{\@dtl@readline}[2]{%
```

Read a line from #1 and store in #2

```
\read#1 to #2%
```

Trim the end of line character

```
\ifdefempty{#2}%
```

```
{%
```

```
}%
```

```
{%
```

```
\dtl@trim#2%
```

```
}%
```

```
}
```

@dtl@readrawline

```
\@dtl@readrawline{<file register>}{<cs>}
```

Reads line from *<file register>*, trims end of line character, applies mappings and stores in *<cs>*.

```
\newcommand*{\@dtl@readrawline}[2]{%
```

Read a line from #1 and store in #2

```
\@dtl@rawread#1 to #2%
```

Trim the end of line character

```
\dtl@trim#2%
```

Apply mappings

```
\dtl@domappings\@dtl@line
```

```
}
```

fDTLnewdbonload

Governs whether or not the database should be defined by \DTLloaddb and \DTLloadrawdb.

```
\newif\ifDTLnewdbonload
```

Ensure compatibility with previous versions:

```
\DTLnewdbonloadtrue
```

\DTLloaddb

```
\DTLloaddb[<options>]{<db name>}{<filename>}
```

Creates a new database called *<db name>*, and loads the data in *<filename>* into it. The separator and delimiter used in the file must match \@dtl@separator and \@dtl@delimiter. The optional argument is a comma-separated list.

```
\newcommand*{\DTLloaddb}{%
```

```
\let\@dtl@doreadline\@dtl@readline
```

```
\@dtlloaddb
```

```
}
```

```

\@dtlloaddb Loads database using \@dtl@doreadline to read and trim line from file. (\@dtl@doreadline
must be set before use.)
    \newcommand*{\@dtlloaddb}[3] [] {%

\newcommand*{\dtlshowdbkeys}[1]{%
  \expandafter\showthe\csname dtlkeys@#1\endcsname
}

```

```
\dtlshowtype \dtlshowtype{<db name>}{<key>}
```

Show the data type for given key in the named database. This should be an integer from 0 to 3.

```

\newcommand*{\dtlshowtype}[2]{%
  \DTLgetdatatype{\@dtl@type}{#1}{#2}\show\@dtl@type
}

```

## 5 datagidx.sty

This package provides a means to produce indices and glossaries without the need for an external indexing application, such as `makeindex` or `xindy`. However, the code here has been developed to implement the word order style described by the Oxford Style Manual. If you are not writing in English, this may not be applicable to your needs. You may be able to define your own comparison handler to use with `\dtlsort`. If not, you'll need to use `xindy` with a package such as `glossaries`.

Declare package:

```
\NeedsTeXFormat{LaTeX2e}
\ProvidesPackage{datagidx}[2016/07/28 v2.27 (NLCT)]
```

Required packages:

```
\RequirePackage{datatool}
\RequirePackage{etoolbox}
\RequirePackage{xkeyval}
\RequirePackage{mfirstuc}
\RequirePackage{xfor}
\RequirePackage{multicol}
\RequirePackage{textcase}

\RequirePackage{afterpage}
```

### 5.1 Default Settings

These commands need to be defined before the package options are used.

`\datagidx@columns` The number of columns to use for the index/glossary.

```
\newcommand*{\datagidx@columns}{2}
```

`\DTLgidxSetColumns`

```
\newcommand*{\DTLgidxSetColumns}[1]{%
  \DTLifint{#1}%
  {%
    \def\datagidx@columns{#1}%
  }%
  {%
    \PackageError{datagidx}%
      {Number of columns must be an integer}%
      {%
        You have requested ‘#1’ columns, which can’t be parsed as a
        number%
      }
  }
}
```

```

    }%
  }%
}

LgidxChildCount  Child counter.

Sorting can take a long time (especially with large databases) but two  $\LaTeX$  runs are usually required to get the index or glossary up-to-date, so we usually don't need to worry about sorting on the first run (unless the order in some way affects the document, e.g. the group headings are to appear in the table of contents). It may also be that some modifications are done to the document that don't require a re-sort. The optimize setting tries to minimize the amount of sorting done to help speed up document compilation.

There are two optimization levels: low and high. The low level optimization just sorts every other  $\LaTeX$  run. This is done by writing to the aux file to determine whether or not the sort should be done next run. This is a cheap and easy hack that won't work if sorting makes the document out-of-date (for example, if the sorted index or glossary affects the table of contents by, say, making the group headings a sectional unit).

The high level optimization is more complicated and involves writing the sorted database to an external file and reading it in on the next run. This requires checks to see if the location lists have changed, in which case a new sort may be required.

The optimization function is only implemented when the sorting is specified via the sort key. Any explicit sorting done by the user via commands such as `\dltsort` are not effected by the optimization setting.

atagidx@do@sort    Indicate what to do when it's time to sort the index/glossary. This defaults to un-optimised setting to avoid confusing users who don't like to read the manual.

```
\newcommand*{\datagidx@do@sort}{\datagidx@sort}
```

First deal with the low-level optimization as it's easier to implement.

x@optimize@sort    The code to perform when the low optimize setting is on. If the command \datagidx@do@optimize@sort has been defined, do the sort. If it hasn't been defined, don't sort. If a sort isn't performed, the command definition is written to the aux file. If a sort is performed, the command definition isn't written to the aux file. This will do the sort every other run.

```
\newcommand*{\datagidx@optimize@sort}{%
First, has \datagidx@do@optimize@sort been defined?
\ifdef\datagidx@do@optimize@sort
{%
It has been defined so go ahead and do the sort.
\datagidx@sort
}%
}%
It hasn't been defined so don't sort. Write the command definition into the aux file for the
next run.
\protected@write\@auxout{}{%
\string\gdef\string\datagidx@do@optimize@sort{}%
}%
Let the user know they need to recompile the document.
\global\let\@datagidx@dorerun@warn@sort\@data@rerun@warn@sort
}%
}
```

f@datagidx@warn    Provide a switch to allow warnings to be suppressed.

```
\newif\if@datagidx@warn
\@datagidx@warntrue
```

dx@dorerun@warn

```
\newcommand*\@datagidx@dorerun@warn{}
\AtEndDocument{\if@datagidx@warn\@datagidx@dorerun@warn\fi}
```

rerun@warn@sort

```
\newcommand*\@datagidx@dorerun@warn@sort{}
\AtEndDocument{\if@datagidx@warn\@datagidx@dorerun@warn@sort\fi}
```

rerun@warn@sort    Warning issued when a rerun is required to sort the index or glossary.

```
\newcommand*\@data@rerun@warn@sort{%
\PackageWarningNoLine{datagidx}{Rerun required to sort the
index/glossary databases}%
}
```

```

gidx@rerun@warn  Warning issued when a rerun is required to update the location lists.
                  \newcommand*\@data@rerun@warn{%
                    \PackageWarningNoLine{datagidx}{Rerun required to ensure the
                      index/glossary location lists are up-to-date}%
                  }

```

The high optimize setting is more complicated. This involves writing each database to an external file (named \jobname-*<db label>*.gidx). The sort is only performed if new terms are added or used.

```

ighopt@optimize

```

```

\newcommand*\@datagidx@do@highopt@optimize{%

\string\db@col@id@w\space #3%
\expandafter\@gobble\string\%^~J
\string\db@col@id@end@\space
}
```

With the ‘highopt optimize’ setting, whenever a location is written to the aux file, if no location has been defined the database needs sorting.

`@highopt@update` Default does nothing. (Argument is the entry’s label.)  
`\newcommand*\@datagidx@do@highopt@update}[1]{}{}`

`highoptfilename` Expands to the name of the filename associated with the database identified by the argument for the ‘highopt’ setting.  
`\newcommand*\@datagidxhighoptfilename}[1]{\jobname-#1.gidx}`

## 5.2 Package Options

`optimize` A boolean option indicating whether or not to optimize the sort. This is only available as a global option. If you want to optimize some glossaries but not others, switch on the optimize

function and clear the sort key for the relevant glossaries and manually sort using `\dtlsort` before the glossary is displayed.

```
\define@choicekey{datagidx.sty}{optimize}[\val\nr]%
{off,low,high}[high]%
{%
  \ifcase\nr\relax
    \renewcommand*{\datagidx@do@sort}{\datagidx@sort}
  \or
    \renewcommand*{\datagidx@do@sort}{\datagidx@optimize@sort}
  \or
    \datagidx@do@highopt@optimize
  \fi
}
```

**nowarn** A boolean option to suppress warnings.

```
\define@choicekey{datagidx.sty}{nowarn}[\val\nr]{true,false}[true]%
{%
  \ifcase\nr\relax
    \@datagidx@warnfalse
  \or
    \@datagidx@warntrue
  \fi
}
```

These options govern the general layout of the glossary/index.

**columns** The number of columns used by `multicols` (or `multicols*`). If only one column is specified, `multicols` (or `multicols*`) isn't used.

```
\define@key{datagidx.sty}{columns}%
{%
  \DTLgidxSetColumns{#1}%
}
```

**child** Indicates whether or not to show the name in child entries.

```
\define@choicekey{datagidx.sty}{child}[\val\nr]%
{named,noname}%
{%
  \datagidx@setchildstyle\nr
}
```

**namecase** Options for name case.

```
\define@choicekey{datagidx.sty}{namecase}[\val\nr]%
{nochange,uc,lc,firstuc,capitalise}%
{%
  \datagidx@setnamecase\nr
}
```

**namefont** Option to set the name font.

```

\define@key{datagidx.sty}{namefont}%
{%
  \renewcommand*{\DTLgidxNameFont}[1]{\{#1{##1}\}}%
}

postname What to put after the name.
\define@key{datagidx.sty}{postname}
{%
  \renewcommand*{\DTLgidxPostName}{#1}%
}

postdesc what to put after the description.
\define@choicekey{datagidx.sty}{postdesc}[\val\nr]%
{none,dot}%
{%
  \datagidx@setpostdesc\nr
}

prelocation What to put before the location list.
\define@choicekey{datagidx.sty}{prelocation}[\val\nr]%
{none,enspace,space,dotfill,hfill}%
{%
  \datagidx@setprelocation\nr
}

location How to display the location list.
\define@choicekey{datagidx.sty}{location}[\val\nr]%

newtermlabelhook
\newcommand*{\newtermlabelhook}{}

DTLgidxNoFormat
\newcommand*{\DTLgidxNoFormat}[1]{#1}

\DTLgidxGobble
\newcommand*{\DTLgidxGobble}[1]{}

xStripBackslash Argument must be a control sequence. This is stringified and the first character (The back-
slash) is removed).
\newcommand*{\DTLgidxStripBackslash}[1]{%
  \expandafter@gobble\string#1%
}

\DTLgidxName \DTLgidxName{\<forenames>}{\<surname>}

How to format a person's name in the text.
\newcommand*{\DTLgidxName}[2]{%
  #1\space #2%
}

\DTLgidxNameNum \DTLgidxNameNum{\<n>}

The argument <n> should be a number applied to a name (e.g. James_\DTLgidxNameNum1).
This is converted to a two-digit number for sorting but a Roman numeral for the label and in
the text.
\newcommand*{\DTLgidxNameNum}[1]{\@Roman{#1}}

datagidx@namenum Conversion for sort key.
\newcommand*{\datagidx@namenum}[1]{\two@digits{#1}}

```

`\DTLgidxPlace` `\DTLgidxPlace{<country>}{<town/city>}`

How to format a place in the text.

```
\newcommand*{\DTLgidxPlace}[2]{%
  #2%
}
```

`\DTLgidxSubject` `\DTLgidxSubject{<main>}{<category>}`

How to format a subject in the text. Ignore the main part in the text.

```
\newcommand*{\DTLgidxSubject}[2]{%
  #2%
}
```

`\DTLgidxOffice` `\DTLgidxOffice{<office>}{<name>}`

Put the office in parentheses in the document text.

```
\newcommand*{\DTLgidxOffice}[2]{%
  #2 (#1)%
}
```

`\DTLgidxIgnore` Show argument in document text, but disregard in the sort and label.

```
\newcommand*{\DTLgidxIgnore}[1]{#1}
```

`\DTLgidxMac` `\DTLgidxMac{<text>}`

In the document, just does <text>, but gets converted to “Mac” in the sort key. (Unless overridden by the user.)

```
\newcommand*{\DTLgidxMac}[1]{#1}
```

`\datagidx@mac` `\DTLgidxMac` gets temporarily redefined to `\datagidx@mac` when construction the sort key.

```
\newcommand*{\datagidx@mac}[1]{Mac}
```

`\DTLgidxSaint` `\DTLgidxSaint{<text>}`

In the document, just does *<text>*, but gets converted to “Saint” in the sort key. (Unless overridden by the user.)

```
\newcommand*{\DTLgidxSaint}[1]{#1}
```

`\datagidx@saint` `\DTLgidxMac` gets temporarily redefined to `\datagidx@saint` when construction the sort key.

```
\newcommand*{\datagidx@saint}[1]{Saint}
```

`\DTLgidxRank` `\DTLgidxRank{<rank>}{<forenames>}`

A person’s title, rank or sanctity should be ignored when sorting.

```
\newcommand*{\DTLgidxRank}[2]{#1~#2}
```

`\datagidx@rank` `\DTLidxRank` gets temporarily redefined to `\datagidx@rank` when constructing the sort key. An extra dot is added to the end to ensure names without a rank are sorted before identical names with a rank.

```
\newcommand*{\datagidx@rank}[2]{#2.}
```

`\DTLgidxParticle` `\DTLgidxParticle{<particle>}{<surname>}`

A particle such as “of”, “de” or “von” should be ignored when sorting.

```
\newcommand*{\DTLgidxParticle}[2]{#1~#2}
```

`\tagidx@particle` `\DTLidxParticle` gets temporarily redefined to `\datagidx@particle` when constructing the sort key. An extra dot is added to the end to ensure names without a particle are sorted before identical names with a particle.

```
\newcommand*{\datagidx@particle}[2]{#2.}
```

`\tagidx@bothoftwo`

```
\newcommand*{\datagidx@bothoftwo}[2]{#1#2}
```

`\datagidx@person` Used when constructing the sort key for a name.

```
\newcommand*{\datagidx@person}[2]{#2\noexpand\datatoolpersoncomma #1}
```

`\datagidx@place` Used when constructing the sort key for a place.

### 5.8.1 Using Acronyms

<code>\DTLgidxFormatAcr</code>	<code>\DTLgidxFormatAcr{&lt;label&gt;}{&lt;long field&gt;}{&lt;short field&gt;}</code>
	<code>\newcommand*{\DTLgidxFormatAcr}[3]{%</code>
	<code>\DTLgidxAcrStyle{\glsdispenry{#1}{#2}}{\useentry{#1}{#3}}%</code>
	<code>}</code>

<code>\LgidxFormatAcrUC</code>	<code>\DTLgidxFormatAcr{&lt;label&gt;}{&lt;long field&gt;}{&lt;short field&gt;}</code>
--------------------------------	--

As previous but capitalise first word.

```
\newcommand*{\DTLgidxFormatAcrUC}[3]{%
  \DTLgidxAcrStyle{\Glsdispenentry{#1}{#2}}{\useentry{#1}{#3}}%
}
```

`\acr`

```
\DeclareRobustCommand*{\acr}[1]{%
  \ifentryused{#1}%
  {\useentry{#1}{Short}}%
  {\DTLgidxFormatAcr{#1}{Long}{Short}}%
}
```

`\acrpl`

```
\DeclareRobustCommand*{\acrpl}[1]{%
  \ifentryused{#1}%
  {\useentry{#1}{ShortPlural}}%
  {\DTLgidxFormatAcr{#1}{LongPlural}{ShortPlural}}%
}
```

`\Acr`

```
\DeclareRobustCommand*{\Acr}[1]{%
  \ifentryused{#1}%
  {\Useentry{#1}{Short}}%
  {\DTLgidxFormatAcrUC{#1}{Long}{Short}}%
}
```

`\Acrpl`

```
\DeclareRobustCommand*{\Acrpl}[1]{%
  \ifentryused{#1}%
  {\Useentry{#1}{ShortPlural}}%
  {\DTLgidxFormatAcrUC{#1}{LongPlural}{ShortPlural}}%
}
```

## 5.9 Displaying Glossaries, Lists of Acronyms, Indices

Define keys for `\printterms`:

```
\define@key{printterms}{database}{\renewcommand*{\newterm@database}{#1}}
```

Options for post description.

```
\define@choicekey{printterms}{postdesc}[\val\nr]%
{none,dot}%
{%
  \datagidx@setpostdesc\nr
}
```

Options for pre-location.

```
\define@choicekey{printterms}{prelocation}[\val\nr]%
{none,enspace,space,dotfill,hfill}%
}
```

```
{%
  \datagidx@setprelocation\nr
}
```

How to display the location list.

```
\define@choicekey{printterms}{location}[\val\nr]%
{hide,list,first}%
{\datagidx@setlocation\nr}
```

How to format the symbol in relation to the description.

```
\define@choicekey{printterms}{symboldesc}[\val\nr]%
{symbol,desc,(symbol) desc,desc (symbol),symbol desc,desc symbol}%
{\datagidx@formatsymdesc\nr}
```

How many columns to have.

```
\define@key{printterms}{columns}%
{%
  \DTLgidxSetColumns{#1}%
}
```

How to format the name.

```
\define@choicekey{printterms}{namecase}[\val\nr]%
{nochange,uc,lc,firstuc,capitalise}%
{%
  \datagidx@setnamecase\nr
}
```

```
\define@key{printterms}{namefont}%
{%
  \renewcommand*{\DTLgidxNameFont}[1]{\fontfamily{#1}}%
}
```

```
\define@key{printterms}{postname}
{%
  \renewcommand*{\DTLgidxPostName}{#1}%
}
```

```
\define@choicekey{printterms}{see}[\val\nr]%
{comma,brackets,dot,space,nosep,semicolon,location}%
{\datagidx@setsee\nr}
```

```
\define@choicekey{printterms}{child}[\val\nr]%
{named,noname}%
{%
  \datagidx@setchildstyle\nr
}
```

Symbol width

```
\define@key{printterms}{symbolwidth}%
{%
  \setlength{\datagidxsymbolwidth}{#1}%
}
```

Location width

```
\define@key{printterms}{locationwidth}{%  
  {%  
    \setlength{\datagidxlocationwidth}{#1}%  
  }  
}
```

Child sort:

```
\define@choicekey{printterms}{childsort}[\val\nr]{%  
  {true,false}[true]%  
  {%  
    \datagidx@setchildsort\nr  
  }  
}
```

Change style:

```
\define@choicekey{printterms}{showgroups}{true,false}[true]{%  
  \appto\newterm@styles{showgroups={#1},}%  
}  
  
\define@key{printterms}{style}{\appto\newterm@styles{style={#1},}}  
  
\define@key{printterms}{heading}{\appto\newterm@styles{heading={#1},}}  
  
\define@key{printterms}{postheading}{%  
  \appto\newterm@styles{postheading={#1},}%  
}  
  
\define@key{printterms}{sort}{\appto\newterm@styles{sort={#1},}}  
  
\define@choicekey{printterms}{balance}[\val\nr]{true,false}[true]{%  
  \ifcase\nr\relax  
    \appto\newterm@styles{balance=true},}%  
  \or  
    \appto\newterm@styles{balance=false},}%  
  \fi  
}
```

terms@condition

```
\newcommand*{\printterms@condition}{\boolean{true}}  
\define@key{printterms}{condition}{\renewcommand*{\printterms@condition}{#1}}
```

\printterms

\printterms[options]

Print the list of terms

```
\newcommand{\printterms}[1][]{%  
  \bgroup
```

Set default database.

```
\let\newterm@database\datagidx@defaultdatabase
```

Initialise key list for style:

```
\let\newterm@styles\@empty
```

Set options:

```
\setkeys{printterms}{#1}%
```

Check if database exists.

```
\DTLifdbexists{\newterm@database}%  
{%
```

Provide user the means to access the current database name.

```
\edef\DTLgidxCurrentdb{\newterm@database}%
```

Get the fields from datagidx:

```
\edef\do@getrow{\noexpand\dtlgetrowforvalue  
{datagidx}%  
{\dtlcolumnindex{datagidx}{Glossary}}%  
{\newterm@database}%  
}%  
\do@getrow  
\dtlgetentryfromcurrentrow  
{\datagidx@title}%  
{\dtlcolumnindex{datagidx}{Title}}%  
\dtlgetentryfromcurrentrow  
{\datagidx@heading}%  
{\dtlcolumnindex{datagidx}{Heading}}%  
\dtlgetentryfromcurrentrow  
{\datagidx@postheading}%  
{\dtlcolumnindex{datagidx}{PostHeading}}%  
\dtlgetentryfromcurrentrow  
{\datagidx@multicols}%  
{\dtlcolumnindex{datagidx}{MultiCols}}%  
\dtlgetentryfromcurrentrow  
{\datagidx@sort}%  
{\dtlcolumnindex{datagidx}{Sort}}%  
\dtlgetentryfromcurrentrow  
{\datagidx@style}%  
{\dtlcolumnindex{datagidx}{Style}}%  
\dtlgetentryfromcurrentrow  
{\datagidx@showgroups}%  
{\dtlcolumnindex{datagidx}{ShowGroups}}%
```

Allow user to override style here.

```
\edef\dtl@do@setkeys{\noexpand\setkeys{newgloss}{\expandonce\newterm@styles}}%  
\dtl@do@setkeys
```

Do we need to use multicols?

```
\ifnum\datagidx@columns>1\relax  
  \edef\datagidx@prestart{%  
    \noexpand\begin{\datagidx@multicols}{\datagidx@columns}%  
  }%  
  \edef\datagidx@postend{%  
    \noexpand\end{\datagidx@multicols}%  
  }%
```

```

\else
  \def\datagidx@prestart{}%
  \def\datagidx@end{}%
\fi
\let\@dtl@dbname\DTLgidxCurrentdb

```

Set the style

```

\csuse{datagidxshowgroups\datagidx@showgroups}%
\datagidxsetstyle{\datagidx@style}%

```

Now display the glossary/index:

```

\def\datagidx@labellist{}%
\datagidx@heading{\datagidx@title}%
\datagidx@postheading
\datagidx@do@sort
\datagidx@prestart
\datagidx@start
\let\DTLgidxName\datagidx@invert
\let\DTLgidxPlace\datagidx@invert
\let\DTLgidxSubject\datagidx@invert
\let\DTLgidxOffice\datagidx@invert
\DTLgidxForeachEntry
{%
  \datagidxitem
}%
\datagidxend
\datagidx@end
}%
{%

```

Database doesn't exist.

```

\PackageError{datagidx}%
{Glossary/index data base ‘\newterm@database’ doesn’t exist}%
{%
  You must define the glossary/index data base before you can
  use it.%
}%
}%
\egroup
}

```

tagidx@getgroup Get the current group.

```

\def\datagidx@getgroup#1#2\datagidx@endgetgroup{%
  \dtl@setcharcode{#1}{\count@}%
  \dtlifintclosedbetween{\count@}{48}{57}%
  {%

                  \newcount\datagidx@level

## 6 databib.sty

### 6.1 Package Declaration

```
\NeedsTeXFormat{LaTeX2e}
\ProvidesPackage{databib}[2016/07/28 v2.27 (NLCT)]
```

Load required packages:

```
\RequirePackage{datatool}
```

### 6.2 Package Options

`\dtlbib@style` The default bib style is stored in `\dtlbib@style`.

```
\newcommand*{\dtlbib@style}{plain}
```

The `style=databib` package option sets `\dtlbib@style`.

```
\define@choicekey{databib.sty}{style}{plain,abbrv,alpha}{%
\def\dtlbib@style{#1}}
```

Process package options:

```
\ProcessOptionsX
```

### 6.3 Loading BBL file

`\DTLloadbbl` `\DTLloadbib[<bbl file>]{<db name>}{<bib list>}`

```
\newcommand*{\DTLloadbbl}[3][\jobname.bbl]{%
\bibliographystyle{databib}%
\if@filesw
\immediate\write\@auxout{\string\bibdata{#3}}%
\fi
\DTLnewdb{#2}%
\edef\DTLBIBdbname{#2}%
\@input{#1}}
```

`\DTLnewbibrow` `\DTLnewbibrow` adds a new row to the bibliography database. (`\DTLBIBdbname` must be set prior to use to the name of the datatool database which must exist. Any check to determine its existence should be performed when `\DTLBIBdbname` is set.)

```
\newcommand*{\DTLnewbibrow}{\@DTLnewrow{\DTLBIBdbname}}
```

`\DTLnewbibitem`

`\DTLnewbibitem{<key>}{<value>}`

Adds a new database entry with the given key and value.

```
\newcommand*{\DTLnewbibitem}[2]{%
  \@DTLnewdbentry{\DTLBIBdbname}{#1}{#2}}
```

## 6.4 Predefined text

`\andname`

```
\providecommand*{\andname}{and}
```

`\ofname`

```
\providecommand*{\ofname}{of}
```

`\inname`

```
\providecommand*{\inname}{in}
```

`\etalname`

```
\providecommand*{\etalname}{et al.}
```

`\editorname`

```
\providecommand*{\editorname}{editor}
```

`\editorsname`

```
\providecommand*{\editorsname}{editors}
```

`\volumename`

```
\providecommand*{\volumename}{volume}
```

`\numbername`

```
\providecommand*{\numbername}{number}
```

`\pagesname`

```
\providecommand*{\pagesname}{pages}
```

`\pagename`

```
\providecommand*{\pagename}{page}
```

`\editionname`

```
\providecommand*{\editionname}{edition}
```

`\techreportname`

```
\providecommand*{\techreportname}{Technical report}
```

```

\mscthesisname
    \providecommand*{\mscthesisname}{Master's thesis}

\phdthesisname
    \providecommand*{\phdthesisname}{PhD thesis}

```

## 6.5 Displaying the bibliography

```
\DTLbibliography{<bib dbname>}
```

Displays the bibliography for the database *<bib dbname>* which must have previously been loaded using `\DTLloadbbl`.

```

DTLbibliography
    \newcommand*{\DTLbibliography}[2][\boolean{true}]{%
        \begin{DTLthebibliography}[#1]{#2}%
        \DTLforeachbibentry[#1]{#2}{%
            \DTLbibitem \DTLformatbibentry \DTLendbibitem
        }%
        \end{DTLthebibliography}%
    }

```

```
DTLformatbibentry \DTLformatbibentry
```

Formats the current bib entry.

```
\newcommand*{\DTLformatbibentry}{%
```

Check format for this type is defined.

```

    \@ifundefined{DTLformat\DBIBentrytype}%
    {%
        \PackageError{datbib}{Don't know how to format bibliography
            entries of type '\DBIBentrytype'}{}%
    }%
    {%

```

Print information to terminal and log file if in verbose mode.

```
\dtl@message{[\DBIBcitekey]}%
```

Initialise

```
\DTLstartsentencefalse\DTLmidsentencefalse\DTLperiodfalse
```

Format this entry

```

    \csname DTLformat\DBIBentrytype\endcsname
    }%
}

```

DTLformatbibentry

```
\gDTLformatbibentry
```

Global version.

```
\newcommand*{\gDTLformatbibentry}{%
```

Check format for this type is defined.

```
\@ifundefined{DTLformat\DBIBentrytype}%  
{%  
  \PackageError{databib}{Don't know how to format bibliography  
    entries of type '\DBIBentrytype'}{}%  
}%  
{%
```

Print information to terminal and log file if in verbose mode.

```
\dtl@message{[\DBIBcitekey]}%
```

Initialise

```
\global\DTLstartsentencefalse  
\global\DTLmidsentencefalse  
\global\DTLperiodfalse
```

Format this entry

```
\csname DTLformat\DBIBentrytype\endcsname  
}%  
}
```

DTLformatthisbibentry

```
\DTLformatthisbibentry{<db>}{<cite key>}
```

Just does \DTLformatbibentry for a given entry.

```
\newcommand*{\DTLformatthisbibentry}[2]{%  
  \edef\DBIBname{#1}%  
  \edef\DBIBcitekey{#2}%  
  \edtlgetrowforvalue{#1}{\dtlcolumnindex{#1}{CiteKey}}{\DBIBcitekey}%  
  \dtl@gathervalue{#1}{\dtlcurrentrow}%  
  \letcs{\DBIBentrytype}{\dtl@key@EntryType}%  
  \DTLformatbibentry  
}
```

\DTLendbibitem

Hook to add extra information at the end of a bibliography item. This does nothing by default.

```
\newcommand*{\DTLendbibitem}{}%
```

\DTLwidest

Define a length to store the widest bib entry label

```
\newlength\dtl@widest
```

tewidestbibentry

```
\DTLcomputewidestbibentry{<condition>}{<db name>}{<bib label>}{<cmd>}
```

Computes the widest bibliography entry over all entries satisfying *<condition>* for the database called *<db name>*, where the bibliography label is formatted according to *<bib label>* and stores the result in *<cmd>* which must be a command name.

```
\newcommand*\DTLcomputewidestbibentry[4]{%
\dtl@widest=0pt\relax
\let#4=\@empty
\DTLforeachbibentry[#1]{#2}{%

}%
}%
}
```

DTLbibrow    The counter DTLbibrow keeps track of the current row in the body of \DTLforeachbibentry. (You can't rely on DTLrowi, DTLrowii and DTLrowiii, as \DTLforeachbibentry pass the conditions to the optional argument of \DTLforeach, but instead uses \ifthenelse, which means that DTLrowi etc will be incremented, even when the given condition is not met.)

```

\newcounter{DTLbibrow}
```

\theHDTLbibrow    Keep hyperref happy:

```

\def\theHDTLbibrow{\theHDTLrow.bib.\arabic{DTLbibrow}}%
```

\DTLbibfield    \DTLbibfield{*<field name>*}

Gets the value assigned to the field *<field name>* for the current row of \DTLforeachbibentry. (Doesn't check if the field exists, or if it is being used within \DTLforeachbibentry.)

```

\newcommand*{\DTLbibfield}[1]{\csname @dtl@key@#1\endcsname}
```

\DTLbibfieldlet    \DTLbibfield{*<cs>*}{*<field name>*}

Gets the value assigned to the field *<field name>* for the current row of \DTLforeachbibentry and assigns it to the control sequence *<cs>*. (Doesn't check if the field exists, or if it is being used within \DTLforeachbibentry.)

```
\newcommand*{\DTLbibfieldlet}[2]{%
  \letcs{#1}{@dtl@key@#2}%
}
```

`\ifbibfieldexists` `\DTLifbibfieldexists{<field name>}{<true part>}{<false part>}`

Determines whether the given field name exists for the current row of `\DTLforeachbibentry`.

```
\newcommand*{\DTLifbibfieldexists}[3]{%
  \@ifundefined{@dtl@key@#1}{#3}{%
    \expandafter\DTLifnull\csname @dtl@key@#1\endcsname
    {#3}{#2}}}
```

`\anybibfieldexists` `\DTLifanybibfieldexists{<list of field name>}{<true part>}{<false part>}`

Determines whether any of the listed fields exist for the current row of `\DTLforeachbibentry`.

```
\newcommand*{\DTLifanybibfieldexists}[3]{%
  \@for\dtl@thisfield:=#1\do{%
    \@ifundefined{@dtl@key@\dtl@thisfield}{%
      \expandafter\DTLifnull\csname @dtl@key@\dtl@thisfield\endcsname
    }{%
      \@endfortrue}}}%
  \if@endfor
    #2%
  \else
    #3%
  \fi
  \@endforfalse
}
```

`\ifDTLperiod` The conditional `\ifDTLperiod` is used to keep track of any abbreviations ending with a period, this is to ensure that abbreviations aren't followed by a full stop if they already have a full stop terminating the abbreviation.

```
\newif\ifDTLperiod
```

`\Lcheckendsperiod` `\DTLcheckendperiod{<string>}`

Checks if `<string>` ends with a full stop. This sets `\ifDTLperiod`.

```
\newcommand*{\DTLcheckendsperiod}[1]{%
  \dtl@checkendsperiod#1\@nil\relax}
```

```

\def\dtl@checkendsperiod#1#2{%
\def\@dtl@argi{#1}\def\@dtl@argii{#2}%
\def\@dtl@period{.}%
\ifx\@dtl@argi\@nnil
\global\DTLperiodfalse
\let\@dtl@donext=\relax
\else
\ifx\@dtl@argii\@nnil
\ifx\@dtl@argi\@dtl@period
\global\DTLperiodtrue
\else
\global\DTLperiodfalse
\fi
\let\@dtl@donext=\@gobble
\else
\let\@dtl@donext=\dtl@checkendsperiod
\fi
\fi
\@dtl@donext{#2}%
}

```

bfieldendsperiod `\DTLcheckbibfieldendsperiod{<label>}`

Checks if the bib field <label> ends with a full stop. This sets \ifDTLperiod.

```

\newcommand*{\DTLcheckbibfieldendsperiod}[1]{%
\protected@edef\@dtl@tmp{\DTLbibfield{#1}}%
\expandafter\DTLcheckendsperiod\expandafter{\@dtl@tmp}}

```

ifDTLmidsentence `\ifDTLmidsentence`

Determine whether we are in the middle of a sentence.

```
\newif\ifDTLmidsentence
```

DTLstartsentence `\ifDTLstartsentence`

Determine whether we are at the start of a sentence.

```
\newif\ifDTLstartsentence
```

\DTLaddperiod `\DTLaddperiod`

Adds a full stop and sets `\DTLmidsentencefalse`, `\DTLstartsentencetrue` and `\DTLperiodfalse`.

```
\newcommand*{\DTLaddperiod}{\DTLmidsentencefalse\DTLperiodfalse
\DTLstartsentencetrue
\ifDTLperiod\else.\fi}
```

`\DTLaddcomma`

`\DTLaddcomma`

Adds a comma and sets `\DTLmidsentencetrue`, `\DTLperiodfalse` and `\DTLstartsentencefalse`

```
\newcommand*{\DTLaddcomma}{, \DTLmidsentencetrue
\DTLperiodfalse\DTLstartsentencefalse}
```

`\DTLstartsentencespace`

Adds a space if at the start of the sentence, otherwise does nothing. (The space between sentences is added this way, rather than in `\DTLaddperiod` otherwise spurious extra space can occur at the end of the bib item. The `spacefactor` needs to be set manually, because there's stuff in the way of the previous sentence's full stop and this space which confuses the inter sentence spacing (and, of course, the previous sentence could have ended with a capital letter.)

```
\newcommand*{\DTLstartsentencespace}{%
\ifDTLstartsentence\spacefactor=\sfcode'\.\relax\space
\fi\DTLstartsentencefalse}
```

`\DTLtwoand`

In a list of only two author (or editor) names, the text between the two names is given by `\DTLtwoand`:

```
\newcommand*{\DTLtwoand}{\ \andname\ }
```

`\DTLlandlast`

In a list of author (or editor) names, the text between the penultimate and last name is given by `\DTLlandlast`:

```
\newcommand*{\DTLlandlast}{, \andname\ }
```

`\DTLlandnotlast`

In a list of author (or editor) names, the text between the names (except the penultimate and last name) is given by `\DTLlandnotlast`:

```
\newcommand*{\DTLlandnotlast}{, }
```

`\DTLauthorcount`

Define a count register to keep track of the number of authors:

```
\newcount\@dtl@authorcount
```

`\DTLmaxauthors`

The counter `\DTLmaxauthors` indicates the maximum number of author names to display, if there are more than that number, `\etalname` is used.

```
\newcounter{DTLmaxauthors}
\setcounter{DTLmaxauthors}{10}
```

`\DTLformatauthorlist`

Format a list of author names (the list is stored in `\@dtl@key@Author`):

```
\newcommand*{\DTLformatauthorlist}{%
\DTLifbibfieldexists{Author}{%
```

```

\DTLstartsentencespace
\@dtl@authorcount=0\relax
\@for\@dtl@author:=\@dtl@key@Author\do{%
\advance\@dtl@authorcount by 1\relax}%
\@dtl@tmpcount=0\relax
\ifnum\@dtl@authorcount>\c@DTLmaxauthors
{
  \@for\@dtl@author:=\@dtl@key@Author\do{%
  \advance\@dtl@tmpcount by 1\relax
  \ifnum\@dtl@tmpcount=1\relax
  \expandafter\DTLformatauthor\@dtl@author
  \else
  \ifnum\@dtl@tmpcount>\c@DTLmaxauthors
  \DTLandnotlast \etalname
  \expandafter\DTLcheckendsperiod\expandafter{\etalname}%
  \@endfortrue
  \else
  \DTLandnotlast \expandafter\DTLformatauthor\@dtl@author
  \fi
  \fi
  }%
}%
\else
\@for\@dtl@author:=\@dtl@key@Author\do{%
\advance\@dtl@tmpcount by 1\relax
\ifnum\@dtl@tmpcount=1\relax
\expandafter\DTLformatauthor\@dtl@author
\else
\ifnum\@dtl@tmpcount=\@dtl@authorcount
\ifnum\@dtl@authorcount=2\relax
\DTLtwoand
\else
\DTLandlast
\fi
\expandafter\DTLformatauthor\@dtl@author
\else
\DTLandnotlast \expandafter\DTLformatauthor\@dtl@author
\fi
\fi
}%
\fi
}{}%
}

```

**DTLmaxeditors** The counter DTLmaxeditors indicates the maximum number of editor names to display, if there are more than that number, \etalname is used.

```

\newcounter{DTLmaxeditors}
\setcounter{DTLmaxeditors}{10}

```

ormateditorlist    Format a list of editor names (the list is stored in \@dtl@key@Editor):

```

\newcommand*{\DTLformatteditorlist}{%
\DTLifbibfieldexists{Editor}{%
\DTLstartsencespace
\@dtl@authorcount=0\relax
\@for\@dtl@author:=\@dtl@key@Editor\do{%
\advance\@dtl@authorcount by 1\relax}%
\@dtl@tmpcount=0\relax
\ifnum\@dtl@authorcount>\c@DTLmaxeditors
{%
\@for\@dtl@author:=\@dtl@key@Editor\do{%
\advance\@dtl@tmpcount by 1\relax
\ifnum\@dtl@tmpcount=1\relax
\expandafter\DTLformatteditor\@dtl@author
\else
\ifnum\@dtl@tmpcount>\c@DTLmaxeditors
\DTLandnotlast \etalname
\expandafter\DTLcheckendsperiod\expandafter{\etalname}%
\endfortrue
\else
\DTLandnotlast \expandafter\DTLformatteditor\@dtl@author
\fi
\fi
}%
\else
\@for\@dtl@author:=\@dtl@key@Editor\do{%

\ifnum\@dtl@tmpcount=1\relax
\expandafter\DTLformatteditor\@dtl@author
\else
\ifnum\@dtl@tmpcount=\@dtl@authorcount
\ifnum\@dtl@authorcount=2\relax
\DTLtwoand
\else
\DTLandlast
\fi
\expandafter\DTLformatteditor\@dtl@author
\else
\DTLandnotlast \expandafter\DTLformatteditor\@dtl@author
\fi
\fi
}%
\fi
,
\ifnum\@dtl@authorcount=1\relax
\editorname
\expandafter\DTLcheckendsperiod\expandafter{\editorname}%
\else

```

```

\editorsname
\expandafter\DTLcheckendsperiod\expandafter{\editorsname}%
\fi
}{}%
}

```

formatsurnameonly

```
\DTLformatsurnameonly{<von part>}{<surname>}{<jr part>}{<forenames>}
```

This is used when only the surname should be displayed. (The final argument, *<forenames>*, is ignored.)

```

\newcommand*{\DTLformatsurnameonly}[4]{%
\DTLstartsentencespace
\def\@dtl@tmp{#1}%
\ifx\@dtl@tmp\@empty\else#1~\fi
#2%
\def\@dtl@tmp{#3}%
\ifx\@dtl@tmp\@empty
\DTLcheckendsperiod{#2}%
\else
, #3%
\DTLcheckendsperiod{#3}%
\fi
}

```

formatforenames

```
\DTLformatforenames{<forenames>}
```

The format of an author/editor's forenames. If the forenames occur at the start of sentence, a new sentence space is added. The argument is checked to determine whether it ends with a full stop (sometimes the forenames may include initials.)

```

\newcommand*{\DTLformatforenames}[1]{%
\DTLstartsentencespace
#1%
\DTLcheckendsperiod{#1}}

```

atabbrvforenames

```
\DTLformatabbrvforenames{<forenames>}
```

The format of an author/editor's abbreviated forenames. The initials may or may not end in a full stop depending on the commands governing the format of *\DTLstoreinitials*, so the initials need to be checked using *\DTLcheckendsperiod*.

```
\newcommand*{\DTLformatabbrvforenames}[1]{%
```

```

\DTLstartsentencespace
\DTLstoreinitials{#1}{\@dtl@tmp}\@dtl@tmp
\expandafter\DTLcheckendsperiod\expandafter{\@dtl@tmp}}

```

\DTLformatvon \DTLformatvon{*<von part>*}

The format of the “von” part. This does nothing if the argument is empty, otherwise it does the argument followed by a non-breakable space.

```

\newcommand*{\DTLformatvon}[1]{%
\DTLstartsentencespace
\def\@dtl@tmp{#1}%
\ifx\@dtl@tmp\@empty
\else
#1~%
\fi
}

```

DTLformatsurname \DTLformatsurname{*<surname>*}

The format of an author/editor’s surname.

```

\newcommand*{\DTLformatsurname}[1]{%
\DTLstartsentencespace
#1\DTLcheckendsperiod{#1}}

```

\DTLformatjr \DTLformatjr{*<jr part>*}

The format of the “jr” part. This does nothing if the argument is empty.

```

\newcommand*{\DTLformatjr}[1]{%
\DTLstartsentencespace
\def\@dtl@tmp{#1}%
\ifx\@dtl@tmp\@empty
\else
, #1\DTLcheckendsperiod{#1}%
\fi
}

```

tcrossrefeditor Format cross reference editors:

```

\newcommand*{\DTLformatcrossrefeditor}{%
\DTLifbibfieldexists{Editor}{%
\DTLstartsentencespace
\@dtl@authorcount=0\relax

```

```

\@for\@dtl@author:=\@dtl@key@Editor\do{%
\advance\@dtl@authorcount by 1\relax}%
{\@dtl@tmpcount=0\relax
\@for\@dtl@author:=\@dtl@key@Editor\do{%

### 6.5.1 ifthen conditionals

The conditionals defined in this section may be used in the optional argument of `\DTLforeachbibentry`. They may also be used in the first argument of `\ifthenelse`, but only if the command occurs within the body of `\DTLforeachbibentry`.

TLbibfieldexists    `\DTLbibfieldexists{<field label>}`

Checks if named bib field exists for current entry

```

\newcommand*{\DTLbibfieldexists}[1]{%
\TE@throw\noexpand\dtl@testbibfieldexists{#1}%
\noexpand\if@dtl@condition}

```

tbibfieldexists

```

\newcommand*{\dtl@testbibfieldexists}[1]{%
\DTLifbibfieldexists{#1}{\@dtl@conditiontrue}{\@dtl@conditionfalse}}

```

`\DTLbibfieldiseq` `\DTLbibfieldiseq{<field label>}{<value>}`

Checks if the value of the bib field given by *<field label>* is equal to *<value>*. (Uses `\dtlcompare` to determine if the values are equal. If the bib field doesn't exist, the condition is false.)

```
\newcommand*{\DTLbibfieldiseq}[2]{%
\TE@throw\noexpand\dtl@testbibfieldiseq{#1}{#2}%
\noexpand\if@dtl@condition}
```

`estbibfieldiseq`

```
\newcommand*{\dtl@testbibfieldiseq}[2]{%
\DTLifbibfieldexists{#1}{%
\expandafter\let\expandafter\@dtl@tmp\expandafter
=\csname @dtl@key@#1\endcsname
\expandafter\toks@\expandafter{\@dtl@tmp}%
\@dtl@toks{#2}%
\edef\@dtl@docompare{\noexpand\dtlcompare{\noexpand\@dtl@tmpcount}%

\expandafter\let\expandafter\@dtl@tmp\expandafter
=\csname @dtl@key@#1\endcsname
\expandafter\dtl@testifsubstring\expandafter{\@dtl@tmp}{#2}%
}{\@dtl@conditionfalse}}
```

## 6.6 Bibliography Style Macros

The macros defined in this section should be redefined by bibliography styles.

thebibliography

How to format the entire bibliography:

```
\newenvironment{DTLthebibliography}[2][\boolean{true}]{%
\@dtl@tmpcount=0\relax
\@sDTLforeach{#1}{#2}{-}{\advance\@dtl@tmpcount by 1\relax}%
\begin{thebibliography}{\number\@dtl@tmpcount}
}{\end{thebibliography}}
```

\DTLmonthname

The monthname style. The argument must be a number from 1 to 12. By default, uses \dtl@monthname.

```
\newcommand*{\DTLmonthname}[1]{%
\dtl@monthname{#1}}
```

\dtl@monthname

Full month names:

```
\newcommand*{\dtl@monthname}[1]{%
\ifcase#1%
\or January%
\or February%
\or March%
\or April%
\or May%
\or June%
\or July%
\or August%
\or September%
\or October%
```

```

\or November%
\or December%
\fi}

```

@abbrvmmonthname Abbreviated months:

```

\newcommand*{\dtl@abbrvmmonthname}[1]{%
\ifcase#1%
\or Jan.%
\or Feb.%
\or Mar.%
\or Apr.%
\or May%
\or June%
\or July%
\or Aug.%
\or Sept.%
\or Oct.%
\or Nov.%
\or Dec.%
\fi}

```

\DTLbibitem Define how to start a new bibitem:

```

\newcommand*{\DTLbibitem}{\bibitem{\DBIBCitekey}}

```

\DTLmbibitem As \DTLbibitem but for \DTLmbibliography

```

\newcommand*{\DTLmbibitem}[1]{\bibitem{#1@\DBIBCitekey}}

```

\DTLcusbibitem

```

\DTLcusbibitem{<item code>}{<ref text>}{<cite key>}

```

As \DTLbibitem but user provides *<item code>* to use in place of \item. This code can access the cite key using \DBIBCitekey. The *<ref text>* is the text associated with this bib item. (For example, if used in an enumerate environment, *<ref text>* might be \theenumi.)

```

\newcommand*{\DTLcusbibitem}[3]{%
#1%
\if@filesw
\immediate\write\@auxout{\string\bibcite{#3}{#2}}%
\fi
\ignorespaces
}

```

\DTLformatauthor

```

\DTLformatauthor{<von part>}{<surname>}{<junior part>}{<forenames>}

```

The format of an author's name.

	<pre> \newcommand*{\DTLformatauthor}[4]{% \DTLformatforenames{#4} \DTLformatvon{#1}% \DTLformatsurname{#2}% \DTLformatjr{#3}} </pre>

formattechreport The format of a technical report:  
`\newcommand{\DTLformattechreport}{}`

formatunpublished The format of an unpublished work:  
`\newcommand{\DTLformatunpublished}{}`

Predefined names (these correspond to the standard Bib<sub>T</sub><sub>E</sub>X predefined strings of the same name without the leading `\DTL`):

`\DTLacmcs`  
`\newcommand*{\DTLacmcs}{ACM Computing Surveys}`

`\DTLacta`  
`\newcommand*{\DTLacta}{Acta Informatica}`

`\DTLcacm`  
`\newcommand*{\DTLcacm}{Communications of the ACM}`

`\DTLibmjrd`  
`\newcommand*{\DTLibmjrd}{IBM Journal of Research and Development}`

`\DTLibmsj`  
`\newcommand*{\DTLibmsj}{IBM Systems Journal}`

`\DTLieeeese`  
`\newcommand*{\DTLieeeese}{IEEE Transactions on Software Engineering}`

`\DTLieetc`  
`\newcommand*{\DTLieetc}{IEEE Transactions on Computers}`

`\DTLieetcad`  
`\newcommand*{\DTLieetcad}{IEEE Transactions on Computer-Aided Design of Integrated Circuits}`

`\DTLipl`  
`\newcommand*{\DTLipl}{Information Processing Letters}`

`\DTLjacm`  
`\newcommand*{\DTLjacm}{Journal of the ACM}`

`\DTLjcsc`  
`\newcommand*{\DTLjcsc}{Journal of Computer and System Sciences}`

`\DTLscp`  
`\newcommand*{\DTLscp}{Science of Computer Programming}`

```

\DTLsicomp
\newcommand*{\DTLsicomp}{SIAM Journal on Computing}

\DTLtocs
\newcommand*{\DTLtocs}{ACM Transactions on Computer Systems}

\DTLtods
\newcommand*{\DTLtods}{ACM Transactions on Database Systems}

\DTLtog

and Systems}

\DTLtcs
\newcommand*{\DTLtcs}{Theoretical Computer Science}

```

## 6.7 Bibliography Styles

Each bibliography style is set by the command `\dtlbst@style`, where *style* is the name of the bibliography style.

`\dtlbst@plain` The ‘plain’ style:

```
\newcommand{\dtlbst@plain}{%
```

Set how to format the entire bibliography:

```

\renewenvironment{DTLthebibliography}[2][\boolean{true}]{%
\@dtl@tmpcount=0\relax
\@sDTLforeach[##1]{##2}{-}{\advance\@dtl@tmpcount by 1\relax}%
\begin{thebibliography}{\number\@dtl@tmpcount}%
}{\end{thebibliography}}%

```

Set how to start the bibliography entry:

```

\renewcommand*{\DTLbibitem}{\bibitem{\DBIBcitekey}}%
\renewcommand*{\DTLmbibitem}[1]{\bibitem{##1@DBIBcitekey}}%

```

Sets the author name format.

```
\renewcommand*{\DTLformatauthor}[4]{%
\DTLformatforenames{##4}
\DTLformatvon{##1}%
\DTLformatsurname{##2}%
\DTLformatjr{##3}}
```

Sets the editor name format.

```
\renewcommand*{\DTLformateditor}[4]{%
\DTLformatforenames{##4}
\DTLformatvon{##1}%
\DTLformatsurname{##2}%
\DTLformatjr{##3}}
```

Sets the edition format.

```
\renewcommand*{\DTLformatedition}[1]{##1 \editionname}%
```

Sets the monthname format.

```
\let\DTLmonthname\dtl@monthname
```

Sets other predefined names:

```
\renewcommand*{\DTLacmcs}{ACM Computing Surveys}
\renewcommand*{\DTLacta}{Acta Informatica}
\renewcommand*{\DTLcacm}{Communications of the ACM}
\renewcommand*{\DTLibmjrd}{IBM Journal of Research and Development}
\renewcommand*{\DTLibmsj}{IBM Systems Journal}
\renewcommand*{\DTLIEEE}{IEEE Transactions on Software Engineering}
\renewcommand*{\DTLIEEEtc}{IEEE Transactions on Computers}
\renewcommand*{\DTLIEEEtcad}{IEEE Transactions on Computer-Aided Design
of Integrated Circuits}
\renewcommand*{\DTLipl}{Information Processing Letters}
\renewcommand*{\DTLjacm}{Journal of the ACM}
\renewcommand*{\DTLjcsc}{Journal of Computer and System Sciences}
\renewcommand*{\DTLscpr}{Science of Computer Programming}
\renewcommand*{\DTLsicomp}{SIAM Journal on Computing}
\renewcommand*{\DTLtocs}{ACM Transactions on Computer Systems}
\renewcommand*{\DTLtods}{ACM Transactions on Database Systems}
\renewcommand*{\DTLtog}{ACM Transactions on Graphics}
\renewcommand*{\DTLtoms}{ACM Transactions on Mathematical Software}
\renewcommand*{\DTLtoois}{ACM Transactions on Office Information
Systems}
\renewcommand*{\DTLtoplas}{ACM Transactions on Programming Languages
and Systems}
\renewcommand*{\DTLtcs}{Theoretical Computer Science}
```

The format of an article.

```
\renewcommand*{\DTLformatarticle}{%

}%
\else
\def\@dtl@donext{\dtl@getyearsuffix{#2}{#3}}%
\fi
\fi
\fi
\@dtl@donext
}

```

`ibibliographystyle` `\DTLbibliographystyle{<style>}`

Sets the bibliography style.

```

\newcommand*{\DTLbibliographystyle}[1]{%
\@ifundefined{dtlbst@#1}{\PackageError{datbib}{Unknown
bibliography style ‘#1’}{}}{\csname dtlbst@#1\endcsname}}

```

Set the default bibliography style:

```

\DTLbibliographystyle{\dtlbib@style}

```

## 6.8 Multiple Bibliographies

In order to have multiple bibliographies, there needs to be an aux file for each bibliography. The main bibliography is in `\jobname.aux`, but need to provide a means of creating additional aux files.

`\DTLmultibibs` `\DTLmultibibs{<list>}`

This creates an auxiliary file for each name in `<list>`. For example, `\DTLmultibibs{foo,bar}` will create the files `foo.aux` and `bar.aux`.

```
\newcommand*{\DTLmultibibs}[1]{%
\@for\@dtl@af:=#1\do{%
\@ifundefined{dtl@aux@\@dtl@af}{%
\expandafter\newwrite\csname dtl@aux@\@dtl@af\endcsname
\expandafter\immediate
\expandafter\openout\csname dtl@aux@\@dtl@af\endcsname=\@dtl@af.aux
\expandafter\def\csname b@\@dtl@af @*\endcsname{}%
}%
\PackageError{datbib}{Can't create auxiliary file '@dtl@af.aux',
\expandafter\string\csname dtl@aux@\@dtl@af\endcsname\space
already exists}{}}}
```

Can only be used in the preamble:

```
\@onlypreamble{\DTLmultibibs}
```

`\DTLcite` `\DTLcite[<text>]{<mbib>}{<labels>}`

This is similar to `\cite[<text>]{<labels>}`, except 1) the cite information is written to the auxiliary file associated with the multi-bib `<mbib>` (which must be named in `\DTLmultibibs`) and 2) the cross referencing label is constructed from `<mbib>` and `<label>` to allow for the same citation to appear in multiple bibliographies.

```
\newcommand*{\DTLcite}{\@ifnextchar[{\@tempswatrue \dtl@citex
}{\@tempswafalse \dtl@citex[]}}
```

`\dtl@citex`

```
\def\dtl@citex[#1]#2#3{%
\leavevmode\let\@citea\@empty
\@cite{\@for\@citeb:=#3\do{\@citea
\def\@citea{\penalty \@m \ }%
\edef\@citeb{\expandafter\@firstofone\@citeb\@empty}%
\if@filesw
\@ifundefined{dtl@aux@#2}{%

}%
\expandafter\immediate
\expandafter\write\csname dtl@aux@#2\endcsname{%
\string\citation{\@citeb}}%
}%
\fi}
```

```

\@ifundefined{b@#2@\@citeb}{%
  \hbox{\reset@font\bfseries ?}%
  \@refundefinedtrue
  \@latex@warning{Citation ‘\@citeb ’ on page \thepage \space
    undefined}%
}%
\@cite@ofmt{\csname b@#2@\@citeb \endcsname }%
}%
}}{#1}%
}

```

`\DTLnocite` `\DTLnocite{<mbib>}{<key list>}`

As `\nocite` but uses the aux file associated with `<mbib>` which must have been defined using `\DTLmultibibs`.

```

\newcommand*{\DTLnocite}[2]{%
\@ifundefined{dtl@aux@#1}{%
  \PackageError{databib}{multibib ‘#1’ not defined}{%
    You need to define ‘#1’ in \string\DTLmutlibibs}%
}%
\@bsphack
\ifx\@onlypreamble\document
  \for\@citeb:=#2\do{%
    \edef\@citeb{\expandafter\@firstofone\@citeb}%
    \if@filesw
      \expandafter\immediate
      \expandafter\write\csname dtl@aux@#1\endcsname{%
        \string\citation{\@citeb}}%
    \fi
    \@ifundefined{b@#1@\@citeb}{%
      \@refundefinedtrue
      \@latex@warning{Citation ‘\@citeb ’ undefined}}{}%
    }%
  \else
    \@latex@error{Cannot be used in preamble}\@eha
  \fi
\@esphack
}%
}

```

`\DTLloadmbbl` `\DTLloadmbib{<mbib>}{<db name>}{<bib list>}`

```

\newcommand*{\DTLloadmbbl}[3]{%
\@ifundefined{dtl@aux@#1}{%

```

```

\PackageError{databib}{multibib ‘#1’ not defined}{%
You need to define ‘#1’ in \string\DTLmutlibibs}%
}{%
\if@files
\expandafter\immediate\expandafter
\write\csname dtl@aux@#1\endcsname{\string\bibstyle{databib}}%
\expandafter\immediate\expandafter
\write\csname dtl@aux@#1\endcsname{\string\bibdata{#3}}%
\fi
\DTLnewdb{#2}%
\edef\DTLBIBdbname{#2}%
\@input@{#1.bbl}%
}%
}

```

`\DTLmbibliography[<condition>]{<mbib name>}{<bib dbname>}`

Displays the bibliography for the database *<bib dbname>* which must have previously been loaded using `\DTLloadmbbl`, where *<mbib name>* must be listed in `\DTLmultibibs`.

`DTLmbibliography`

```

\newcommand*{\DTLmbibliography}[3][\boolean{true}]{%
\begin{DTLthebibliography}[#1]{#3}%
\DTLforeachbibentry[#1]{#3}{%
\DTLmbibitem{#2} \DTLformatbibentry \DTLendbibitem
}%
\end{DTLthebibliography}%
}

```

## 7 databar.sty

Process options:

```
\ProcessOptions
```

Required packages:

```

\RequirePackage{datatool}
\RequirePackage{tikz}

```

Define some variables that govern the appearance of the bar chart.

Lbarchartlength	The total height of the bar chart is given by \DTLbarchartheight <pre> \newlength\DTLbarchartlength \DTLbarchartlength=3in </pre>
\DTLbarwidth	The width of each bar is given by \DTLbarwidth. <pre> \newlength\DTLbarwidth \DTLbarwidth=1cm </pre>
Lbarlabeloffset	The offset from the $x$ axis to the bar label if given by \DTLbarlabeloffset. <pre> \newlength\DTLbarlabeloffset \setlength\DTLbarlabeloffset{10pt} </pre>
TLBarXAxisStyle	The style of the $x$ axis is given by \DTLBarXAxisStyle <pre> \newcommand*{\DTLBarXAxisStyle}{-} </pre>
TLBarYAxisStyle	The style of the $y$ axis is given by \DTLBarYAxisStyle. <pre> \newcommand*{\DTLBarYAxisStyle}{-} </pre>
DTLbarroundvar	DTLbarroundvar is a counter governing the number of digits to round to when using \FPround. <pre> \newcounter{DTLbarroundvar} \setcounter{DTLbarroundvar}{1} </pre>
displayYticklabel	\DTLbardisplayYticklabel governs how the $y$ tick labels appear. <pre> \newcommand*{\DTLbardisplayYticklabel}[1]{#1} </pre>
displaylowerbarlabel	\DTLdisplaylowerbarlabel governs how the lower bar labels appear. <pre> \newcommand*{\DTLdisplaylowerbarlabel}[1]{#1} </pre>
displaylowermultibarlabel	\DTLdisplaylowermultibarlabel governs how the lower multi bar labels appear. <pre> \newcommand*{\DTLdisplaylowermultibarlabel}[1]{#1} </pre>
displayupperbarlabel	\DTLdisplayupperbarlabel governs how the upper bar labels appear. <pre> \newcommand*{\DTLdisplayupperbarlabel}[1]{#1} </pre>

<code>\DTLdisplayuppermultibarlabel</code>	<code>\DTLdisplayuppermultibarlabel</code> governs how the upper multi bar labels appear. <code>\newcommand*{\DTLdisplayuppermultibarlabel}[1]{#1}</code>
<code>\DTLbaratbegintikz</code>	<code>\DTLbaratbegintikz</code> specifies any commands to apply at the start of the tikzpicture environment. By default it does nothing. <code>\newcommand*{\DTLbaratbegintikz}{}</code>
<code>\DTLbaratendtikz</code>	<code>\DTLbaratendtikz</code> specifies any commands to apply at the end of the tikzpicture environment. By default it does nothing. <code>\newcommand*{\DTLbaratendtikz}{}</code>
<code>\ifDTLbarxaxis</code>	The conditional <code>\ifDTLbarxaxis</code> is used to determine whether or not to display the $x$ axis <code>\newif\ifDTLbarxaxis</code>
<code>\ifDTLbaryaxis</code>	The conditional <code>\ifDTLbaryaxis</code> is used to determine whether or not to display the $y$ axis. <code>\newif\ifDTLbaryaxis</code>
<code>\ifDTLbarytics</code>	The conditional <code>\ifDTLbarytics</code> to determine whether or not to display the $y$ tick marks. <code>\newif\ifDTLbarytics</code>
<code>\@dtl@barcount</code>	The count register <code>\@dtl@barcount</code> is used to store the current bar index. <code>\newcount\@dtl@barcount</code>

<code>\DTLsetbarcolor</code>	<code>\DTLsetbarcolor{&lt;n&gt;}{&lt;color&gt;}</code>
------------------------------	--

Assigns colour name `<color>` to the `<n>`th bar.

```
\newcommand*{\DTLsetbarcolor}[2]{%

```
\define@boolkey{datapie}[DTL]{rotateinner}[true]{}
```

fDTLrotateouter

```
\define@boolkey{datapie}[DTL]{rotateouter}[true]{}
```

Set defaults:

```
\DTLrotateinnerfalse
\DTLrotateouterfalse
```

### Package options to change \DTLrotateinner

```
\DeclareOption{rotateinner}{\DTLrotateinnertrue}
\DeclareOption{norotateinner}{\DTLrotateinnerfalse}
```

### Package options to change \DTLrotateouter

```
\DeclareOption{rotateouter}{\DTLrotateoutertrue}
\DeclareOption{norotateouter}{\DTLrotateouterfalse}
```

Process options:

\ProcessOptions

Required packages:

```
\RequirePackage{datatool}
\RequirePackage{tikz}
```

Define some variables that govern the appearance of the pie chart.

<code>\DTLradius</code>	The radius of the pie chart is given by <code>\DTLradius</code> . <code>\newlength\DTLradius</code> <code>\DTLradius=2cm</code>
<code>\DTLinnerratio</code>	The inner label offset ratio is given by <code>\DTLinnerratio</code> <code>\newcommand*\DTLinnerratio{0.5}</code>
<code>\DTLouterratio</code>	The outer label offset ratio is given by <code>\DTLouterratio</code> . <code>\newcommand*\DTLouterratio{1.25}</code>
<code>\DTLcutawayratio</code>	The cutaway offset ratio is given by <code>\DTLcutawayratio</code> . <code>\newcommand*\DTLcutawayratio{0.2}</code>
<code>\DTLstartangle</code>	The angle of the first segment is given by <code>\DTLstartangle</code> . <code>\newcommand*\DTLstartangle{0}</code>
<code>dtl@inneroffset</code>	<code>\newlength\dtl@inneroffset</code> <code>\dtl@inneroffset=\DTLinnerratio\DTLradius</code>
<code>dtl@outeroffset</code>	<code>\newlength\dtl@outeroffset</code> <code>\dtl@outeroffset=\DTLouterratio\DTLradius</code>
<code>dtl@cutawayoffset</code>	<code>\newlength\dtl@cutawayoffset</code> <code>\dtl@cutawayoffset=\DTLcutawayratio\DTLradius</code>
<code>dtl@piecutaways</code>	<code>\dtl@piecutaways</code> is a comma separated list of segments that need to be cut away from the pie chart. <code>\newcommand*\dtl@piecutaways{}</code>
<code>\dtl@innerlabel</code>	<code>\dtl@innerlabel</code> specifies the label to appear inside the segment. By default this is the variable used to create the pie chart. <code>\def\dtl@innerlabel{\DTLpievariable}%</code>
<code>\dtl@outerlabel</code>	<code>\def\dtl@outerlabel{}</code>
<code>DTLpieroundvar</code>	<code>DTLpieroundvar</code> is a counter governing the number of digits to round to when using <code>\FPrround</code> . <code>\newcounter{DTLpieroundvar}</code> <code>\setcounter{DTLpieroundvar}{1}</code>

`displayinnerlabel` `\DTLdisplayinnerlabel{<label>}`

This is used to format the inner label. This just does the label by default.

`\newcommand*\DTLdisplayinnerlabel[1]{#1}`

displayouterlabel	<code>\DTLdisplayouterlabel{&lt;label&gt;}</code>
-------------------	---

This is used to format the outer label. This just does the label by default.

```
\newcommand*{\DTLdisplayouterlabel}[1]{#1}
```

<code>\DTLpiepercent</code>	<p><code>\DTLpiepercent</code> returns the percentage value of the current segment.</p> <pre>\newcommand*{\DTLpiepercent}{% \ifnum\dtlforeachlevel=0\relax \PackageError{datapie}{Can't use \string\DTLpiepercent\space outside \string\DTLpiechart}{}% \else \csname dtl@piepercent@romannumeral\@dtl@seg\endcsname \fi}</pre>
-----------------------------	---

<code>\DTLpieatbegintikz</code>	<p><code>\DTLpieatbegintikz</code> specifies any commands to apply at the start of the tikzpicture environment. By default it does nothing.</p> <pre>\newcommand*{\DTLpieatbegintikz}{}%</pre>
---------------------------------	--

<code>\DTLpieatendtikz</code>	<p><code>\DTLpieatendtikz</code> specifies any commands to apply at the end of the tikzpicture environment. By default it does nothing.</p> <pre>\newcommand*{\DTLpieatendtikz}{}%</pre>
-------------------------------	--

tpiesegmentcolor	<code>\DTLsetpiesegmentcolor{&lt;n&gt;}{&lt;color&gt;}</code>
------------------	---

Assign colour name `<color>` to the `<n>`th segment.

```
\newcommand*{\DTLsetpiesegmentcolor}[2]{%
\expandafter\def\csname dtl@pie@segcol\romannumeral#1\endcsname{#2}%
}
```

tpiesegmentcolor	<code>\DTLgetpiesegmentcolor{&lt;n&gt;}</code>
------------------	--

Get the colour specification for segment `<n>`

```
\newcommand*{\DTLgetpiesegmentcolor}[1]{%
\csname dtl@pie@segcol\romannumeral#1\endcsname}
```

opiesegmentcolor	<code>\DTLdopiesegmentcolor{&lt;n&gt;}</code>
------------------	---

Set the colour to that for segment  $\langle n \rangle$

```
\newcommand*{\DTLdopiesegmentcolor}[1]{%
\expandafter\color\expandafter
{\csname dtlpie@segcol\romannumeral#1\endcsname}}
```

`piesegmentcolor` \DTLdocurrentpiesegmentcolor sets the colour to that of the current segment.

```
\newcommand*{\DTLdocurrentpiesegmentcolor}{%
\ifnum\dtlforeachlevel=0\relax
\PackageError{datapie}{Can't use
\string\DTLdocurrentpiesegmentcolor\space outside
\string\DTLpiechart}{}%
\else
\expandafter\DTLdopiesegmentcolor\expandafter{%
\csname c@DTLrow\romannumeral\dtlforeachlevel\endcsname}%
\fi}
```

`pieoutlinecolor` \DTLpieoutlinecolor specifies what colour to draw the outline.

```
\newcommand*{\DTLpieoutlinecolor}{black}
```

`pieoutlinewidth` \DTLpieoutlinewidth specifies the line width of the outline: Outline is only drawn if the linewidth is greater than 0pt.

```
\newlength\DTLpieoutlinewidth
\DTLpieoutlinewidth=0pt
```

Set the default colours. If there are more than eight segments, more colours will need to be defined.

```
\ifDTLcolorpiechart
\DTLsetpiesegmentcolor{1}{red}
\DTLsetpiesegmentcolor{2}{green}
\DTLsetpiesegmentcolor{3}{blue}
\DTLsetpiesegmentcolor{4}{yellow}

`plotatbegintikz` `\DTLplotatbegintikz` is a hook to insert stuff at the start of the `tikzpicture` environment (after the unit vectors have been set).

```
\newcommand*{\DTLplotatbegintikz}{}
```

`plothandlermark` Provide a convenient access to `\pgfplothandlermark` that reverses the effect of the plot scaling.

```
\newcommand*{\@dtlplothandlermark}[1]{%
  \pgfplothandlermark
  {%
    \pgfmathparse{1/\dtl@scale@x}%
    \pgftransformxscale{\pgfmathresult}%
    \pgfmathparse{1/\dtl@scale@y}%
    \pgftransformyscale{\pgfmathresult}%
    #1%
  }%
}
```

Just in case a user attempts to use `\dtlplothandlermark` outside `\DTLplot`:

```
\newcommand*{\dtlplothandlermark}[1]{%
  \PackageWarning{dataplot}{\string\dtlplothandlermark\space
    found outside \string\DTLplot}%
  \pgfplothandlermark{#1}%
}
```

`TLplotatendtikz` `\DTLplotatendtikz` is a hook to insert stuff at the end of the `tikzpicture` environment.

```
\newcommand*{\DTLplotatendtikz}{}
```

Plot settings. The database key for the  $x$  value is given by the `x` setting:

```
\define@key{dataplot}{x}{%
\def\dtl@xkey{#1}}
```

The database key for the  $y$  value is given by the `y` setting:

```
\define@key{dataplot}{y}{%
\def\dtl@ykey{#1}}
```

The list of plot mark colours is given by the `markcolors` setting. (This should be a comma separated list of colour names.)

```
\define@key{dataplot}{markcolors}{%
\def\DTLplotmarkcolors{#1}}
```

The list of plot line colours is given by the `linecolors` setting. (This should be a comma separated list of colour names.)

```
\define@key{dataplot}{linecolors}{%
\def\DTLplotlinecolors{#1}}
```

The list of plot mark and line colours is given by the `colors` setting. (This should be a comma separated list of colour names.)

```
\define@key{dataplot}{colors}{%
\def\DTLplotmarkcolors{#1}%
\def\DTLplotlinecolors{#1}}
```

The list of plot marks is given by the marks setting. (This should be a comma separated list of code that generates pgf plot marks.)

```
\define@key{dataplot}{marks}{%
\def\DTLplotmarks{#1}}
```

The list of plot line styles is given by the lines setting. (This should be a comma separated list of code that sets the line style.) An empty set will create solid lines.

```
\define@key{dataplot}{lines}{%
\def\DTLplotlines{#1}}
```

The total width of the plot is given by the width setting.

```
\define@key{dataplot}{width}{%
\setlength\DTLplotwidth{#1}}
```

The total height of the plot is given by the height setting.

```
\define@key{dataplot}{height}{%
\setlength\DTLplotheight{#1}}
```

# 10 person.sty

## 10.1 Package Declaration

Package identification:

```
\NeedsTeXFormat{LaTeX2e}
\ProvidesPackage{person}[2016/07/28 v2.27 (NLCT)]
```

Requires the ifthen package.

```
\RequirePackage{ifthen}
\RequirePackage{datatool}
```

## 10.2 Defining People

`people` Keep count of the number of people who have been defined:

```
\newcounter{people}
```

`person` Temporary counter

```
\newcounter{person}
```

`\@people@list` Keep a list of labels for each person who has been defined:

```
\newcommand*{\@people@list}{,}
```

`\get@firstperson` Get the first person's name in `\@people@list`, and store in the argument (which must be a control sequence.)

```
\newcommand*{\@get@firstperson}[1]{%
\expandafter\@get@firstperson\@people@list,\@nil{#1}}
\def\@get@firstperson,#1,#2\@nil#3{%
\def#3{#1}%
}
```

`\malelabels` List of labels that can be used to indicate that a person is male (when defining a person using `\newperson`).

```
\newcommand*{\malelabels}{male, Male, MALE, M, m}
```

`\addmalelabel` Adds a label to the list of male labels.

```
\newcommand*{\addmalelabel}[1]{%
\expandafter\@dtl@toksA\expandafter{\malelabels}%
\expandafter\@dtl@toksB\expandafter{#1}%
\edef\malelabels{\the\@dtl@toksA,\the\@dtl@toksB}%
}
```

`\addfemalelabel` Adds a label to the list of female labels.

```

\newcommand*{\addfemalelabel}[1]{%
  \expandafter\@dtl@toksA\expandafter{\femalelabels}%
  \expandafter\@dtl@toksB\expandafter{#1}%
  \edef\femalelabels{\the\@dtl@toksA,\the\@dtl@toksB}%
}

```

`\femalelabels` List of labels that can be used to indicate that a person is female (when defining a person using `\newperson`).

```

\newcommand*{\femalelabels}{female,Female,FEMALE,F,f}

```

`\ifmalelabel` Determines if first argument is contained in the list of male labels. (One level expansion is performed on the first object in first argument.) If true does second argument, otherwise does third argument.

```

\newcommand{\ifmalelabel}[3]{%
  \expandafter\DTLifinlist\expandafter{#1}{\malelabels}{#2}{#3}%
}

```

`\iffemalelabel` Determines if first argument is contained in the list of female labels. (One level expansion is performed on the first object in first argument.) If true does second argument, otherwise does third argument.

```

\newcommand{\iffemalelabel}[3]{%
  \expandafter\DTLifinlist\expandafter{#1}{\femalelabels}{#2}{#3}%
}

```

`\newperson` Define a new person. The optional argument specifies a label with which to refer to that person. If omitted, anon is used. If more than one person is defined, the optional argument will be required to specify a unique label. The compulsory arguments are the person's full name, their familiar name and their gender.

```

\newcommand*{\newperson}[4][anon]{%
  \ifundefined{person@#1@name}%
  {%
    \ifmalelabel{#4}%
    {%
      \expandafter\gdef\csname person@#1@gender\endcsname{male}%
    }%
    {%
      \iffemalelabel{#4}%

\expandafter
  \protected@xdef\csname person@#1@name\endcsname{#3}%
\protected@xdef\@people@list{\@people@list#1,}%
\stepcounter{people}%
}%
{%
  \PackageError{person}{Person ‘#1’ has already been defined}{}%
}%
}

```

### 10.3 Remove People

`\removeperson` Removes person identified by their label from the list.

```

\newcommand*{\removeperson}[1][anon]{%
  \edef\@person@label{#1}%
  \expandafter\@removeperson\expandafter{\@person@label}%
}

```

The label has to be full expanded for the internal command.

```

\newcommand*{\@removeperson}[1]{%
  \ifpersonexists{#1}%
  {%

```

Remove label from list of people.

```

  \def\@remove@person##1,##2\@nil{%
    \def\@prsn@pre{##1}\def\@prsn@post{##2}}%
  \expandafter\@remove@person\@people@list\@nil
  \xdef\@people@list{\@prsn@pre,\@prsn@post}%

```

Decrement number of people:

```

  \addtocounter{people}{-1}%

```

Undefine associated control sequences:

```

  \expandafter\global\expandafter
    \let\csname person@#1@name\endcsname\undefined
  \expandafter\global\expandafter
    \let\csname person@#1@fullname\endcsname\undefined
  \expandafter\global\expandafter
    \let\csname person@#1@gender\endcsname\undefined
}%
{%
  \PackageError{person}{Can’t remove person ‘#1’: no such
    person}{}%
}%
}

```

`\removepeople` Removes the people listed.

```

\newcommand*{\removepeople}[1]{%
  \@for\@thisperson:=#1\do{%
    \ifx\@thisperson\@empty
    \else
      \expandafter\removeperson\expandafter[\@thisperson]%
    \fi
  }%
}

```

`\removeallpeople` Removes everyone.

```

\newcommand*{\removeallpeople}{%
  \@for\@thisperson:=\@people@list\do{%
    \expandafter\global\expandafter
      \let\csname person@\@thisperson @name\endcsname\undefined
    \expandafter\global\expandafter
      \let\csname person@\@thisperson @fullname\endcsname\undefined
    \expandafter\global\expandafter
      \let\csname person@\@thisperson @gender\endcsname\undefined
  }%
  \setcounter{people}{0}%
  \gdef\@people@list{,}%
}

```

## 10.4 Conditionals and Loops

`\ifpersonexists` If person whose label is given by the first argument exists, then do the second argument otherwise do third argument.

```

\newcommand{\ifpersonexists}[3]{%
  \ifundefined{person@#1@name}{#3}{#2}%
}

```

`\ifmale` If the person given by the label in the first argument is male, do the second argument, otherwise do the third argument.

```

\newcommand{\ifmale}[3]{%
  \ifpersonexists{#1}%
  {%
    \edef\@gender{\csname person@#1@gender\endcsname}%
    \ifx\@gender\@male@label
      #2%
    \else
      #3%
    \fi
  }%
  {%
    \PackageError{person}{Person ‘#1’ doesn’t exist.}{}%
  }%
}
\def\@male@label{male}

```

`\ifallmale` If all people listed in first argument are male, do the second argument otherwise do the third argument. If the first argument is omitted, all defined people are checked.

```
\newcommand{\ifallmale}[3][\@people@list]{%
  \@for\@thisperson:=#1\do{%
    \ifpersonexists{\@thisperson}%

## 10.5 Predefined Words

These commands should be redefined if you are writing in another language, but note that these are structured according to English grammar.

```

\malepronoun
\newcommand*{\malepronoun}{he}

\femalepronoun
\newcommand*{\femalepronoun}{she}

\pluralpronoun
\newcommand*{\pluralpronoun}{they}

\maleobjpronoun
\newcommand*{\maleobjpronoun}{him}

\femaleobjpronoun
\newcommand*{\femaleobjpronoun}{her}

\pluralobjpronoun
\newcommand*{\pluralobjpronoun}{them}

\malepossadj
\newcommand*{\malepossadj}{his}

\femalepossadj
\newcommand*{\femalepossadj}{her}

\pluralpossadj
\newcommand*{\pluralpossadj}{their}

\maleposspronoun
\newcommand*{\maleposspronoun}{his}

\femaleposspronoun
\newcommand*{\femaleposspronoun}{hers}

\pluralposspronoun
\newcommand*{\pluralposspronoun}{theirs}

\malechild
\newcommand*{\malechild}{son}

```

<code>\femalechild</code>	<code>\newcommand*{\femalechild}{daughter}</code>
<code>\pluralchild</code>	<code>\newcommand*{\pluralchild}{children}</code>
<code>\malechildren</code>	<code>\newcommand*{\malechildren}{sons}</code>
<code>\femalechildren</code>	<code>\newcommand*{\femalechildren}{daughters}</code>
<code>\maleparent</code>	<code>\newcommand*{\maleparent}{father}</code>
<code>\femaleparent</code>	<code>\newcommand*{\femaleparent}{mother}</code>
<code>\pluralparent</code>	<code>\newcommand*{\pluralparent}{parents}</code>
<code>\malesibling</code>	<code>\newcommand*{\malesibling}{brother}</code>
<code>\femalesibling</code>	<code>\newcommand*{\femalesibling}{sister}</code>
<code>\pluralsibling</code>	<code>\newcommand*{\pluralsibling}{siblings}</code>
<code>\malesiblings</code>	<code>\newcommand*{\malesiblings}{brothers}</code>
<code>\femalesiblings</code>	<code>\newcommand*{\femalesiblings}{sisters}</code>
<code>\andname</code>	Define <code>\andname</code> if it hasn't already been defined: <code>\providecommand*{\andname}{and}</code>
<code>\malename</code>	<code>\newcommand*{\malename}{male}</code>
<code>\femalename</code>	<code>\newcommand*{\femalename}{female}</code>
<code>\personsep</code>	Separator to use between people (but not the between the last two). <code>\newcommand*{\personsep}{, }</code>

`\personlastsep` Separator to use between last two people.  
`\newcommand*{\personlastsep}{\space\andname\space}`

`\twopeoplesep` Separator to use when list only contains two people.  
`\newcommand*{\twopeoplesep}{\space\andname\space}`

## 10.6 Displaying Information

`\personfullname` The person's full name can be displayed using `\personfullname[⟨label⟩]`, where `⟨label⟩` is the unique label used when defining that person. If `⟨label⟩` is omitted, `anon` is used.

```
\newcommand*{\personfullname}[1][anon]{%
  \ifundefined{person@#1@fullname}%
  {%
    \PackageError{person}{Person ‘#1’ has not been defined}{}%
  }%
  {%
    \csname person@#1@fullname\endcsname
  }%
}
```

`\peoplefullname` List all defined people's full names. This iterates through all labels in `\@people@list`.

```
\newcommand*{\peoplefullname}{%
  \setcounter{person}{1}%
  \@for\@thisperson:=\@people@list\do{%
    \ifthenelse{\equal{\@thisperson}{}}{%
    }{%
      \personfullname[\@thisperson]%
      \stepcounter{person}%
      \ifnum\c@people=1\relax
      \else
        \ifnum\c@person=\c@people
          \ifnum\c@people=2\relax
            \twopeoplesep
          \else
            \personlastsep
          \fi
        \else
          \ifnum\c@person<\c@people
            \personsep
          \fi
        \fi
      \fi
    }%
  }%
}
```

`\personname` As `\personfullname`, but for the person's familiar name.

```
\newcommand*{\personname}[1][anon]{%
  \@ifundefined{person@#1@name}%
  {%
    \PackageError{person}{Person ‘#1’ has not been defined}{}%
  }%
  {%
    \csname person@#1@name\endcsname
  }%
}
```

`\peoplename` List all defined people's familiar names. This iterates through all labels in `\@people@list`.

```
\newcommand*{\peoplename}{%
  \setcounter{person}{1}%
  \@for\@thisperson:=\@people@list\do{%
    \ifthenelse{\equal{\@thisperson}{} }%
    {}%
    {%
      \personname[\@thisperson]%
      \stepcounter{person}%
      \ifnum\c@people=1\relax
      \else
        \ifnum\c@person=\c@people
          \ifnum\c@people=2\relax
            \twopeoplesep
          \else
            \personlastsep
          \fi
        \else
          \ifnum\c@person<\c@people
            \personsep
          \fi
        \fi
      \fi
    }%
  }%
}
```

`\personpronoun` Display the pronoun (he/she) according to the person's gender.

```
\newcommand*{\personpronoun}[1][anon]{%
  \@ifundefined{person@#1@gender}%
  {%
    \PackageError{person}{Person ‘#1’ has not been defined}{}%
  }%
  {%

```

## 10.7 Extracting Information

`getpersongender` Gets person's gender and stores in first argument which must be a control sequence.

```
\newcommand*{\getpersongender}[2]{%
  \ifmale{#2}{\let#1\malename}{\let#1\femalename}%
}
```

`\getpersonname` Gets person's name and stores in first argument which must be a control sequence.

```
\newcommand*{\getpersonname}[2]{%
  \ifpersonexists{#2}%
  {%
    \expandafter\let\expandafter#1\csname person@#2@name\endcsname
  }%
  {%
    \PackageError{person}{Person ‘#2’ doesn’t exist}{}%
  }%
}
```

`tpersonfullname` Gets person's full name and stores in first argument which must be a control sequence.

```
\newcommand*{\getpersonfullname}[2]{%
  \ifpersonexists{#2}%
  {%
    \expandafter
      \let\expandafter#1\csname person@#2@fullname\endcsname
  }%
  {%
    \PackageError{person}{Person ‘#2’ doesn’t exist}{}%
  }%
}
```

} %

# Index

Numbers written in *italic* refer to the page where the corresponding entry is described; numbers underlined refer to the definition; numbers in *roman* refer to the pages where the entry is used.

# Change History

## 1.01 (2007 Aug 17)

`\@dtl@checknumericalloop`: fixed bug caused by commands occurring within text being tested ..... 44  
`\@dtl@ifDigitOrDecimalSep`: new ... 44  
`\DTLaddall`: removed extraneous space . 22  
`\DTLbarchart`: uses `\@sDTLforeach` instead of `\DTLforeach` ..... 371  
`\dtlcompare`: replaces `\compare` (no longer using `compare.tex`) ..... 50  
`\DTLforeach`: added starred version .. 152  
`\DTLgetrowforkey`: new ..... 192  
`\DTLgetvalueforkey`: new ..... 191  
`\dtlcompare`: new ..... 61  
`\DTLifclosedbetween`: added starred version ..... 83  
`\DTLifeq`: added starred version ..... 77  
`\DTLifgt`: added starred version ..... 76  
`\DTLiflastrow`: fixed bug ..... 168  
`\DTLiflt`: added starred version ..... 74  
`\DTLifopenbetween`: added starred version ..... 85  
`\DTLifStartsWith`: new ..... 79  
`\DTLifstringclosedbetween`: added starred version ..... 82  
`\DTLifstringeq`: added starred version 77  
`\DTLifstringgt`: added starred version 75  
`\DTLifstringlt`: added starred version 74  
`\DTLifstringopenbetween`: added starred version ..... 84  
`\DTLifSubString`: new ..... 78  
`\DTLinitialhyphen`: new ..... 36  
`\DTLinitials`: now uses `\DTLinitialhyphen` ..... 34  
     now works with unbreakable space symbol ..... 34  
`\DTLisiclosedbetween`: new ..... 90  
`\DTLisieq`: new ..... 88  
`\DTLisigt`: new ..... 88  
`\DTLisilt`: new ..... 87

`\DTLisiopenbetween`: new ..... 90  
`\DTLisPrefix`: new ..... 88  
`\DTLisSubString`: new ..... 88  
`\DTLmaxall`: removed extraneous space . 28  
`\DTLmeanforall`: removed extraneous space ..... 29  
`\DTLminall`: removed extraneous space . 27  
`\DTLmultibarchart`: uses `\@sDTLforeach` instead of `\DTLforeach` ..... 378  
`\DTLpiechart`: uses `\@sDTLforeach` instead of `\DTLforeach` ..... 392  
`\DTLplot`: uses `\@sDTLforeach` instead of `\DTLforeach` ..... 418  
`\DTLplotstream`: uses `\@sDTLforeach` instead of `\DTLforeach` ..... 400  
`\DTLremovecurrentrow`: fix bug caused by missing `\fi` and unrequired argument ..... 165  
`\DTLsdforall`: fixed bug ..... 31  
     removed extraneous space ..... 31  
`\DTLsort`: added optional argument .. 192  
     added starred version ..... 192  
`\DTLsplitstring`: new ..... 40  
`\DTLstoreinitials`: now uses `\DTLinitialhyphen` ..... 35  
     now works with unbreakable space symbol ..... 35  
`\DTLsubstituteall`: fixed bug caused when certain commands occur in the string ..... 41  
`\DTLvarianceforall`: fixed bug ..... 30  
     removed extraneous space ..... 30  
1.01 (2007/08/22)  
     `\DTLmultibibs`: new ..... 362  
1.03 (2009 January 27)  
     `\DTLnewbibitem`: removed check if database exists ..... 317  
     `\DTLnewbibrow`: removed check if database exists ..... 316
